Research Triangle Park, NC USA

First World Sustainability Forum

November 1 2011

EPA's Office of Research and Development Research framework in six priority areas

Background

Measurable health consequences have a wide variety of root causes.

➤ **Socioeconomic circumstances**

➤ Adler et al. 2007), education (Backlund et al. 1999; Din-Dzietham et al. 2000; Fleishman 2005; Lleras-Muney 2005; Kawachi et al. 2010),

➤ **Environmental** (Cummings and Kreiss 2008; Ferrie et al. 2008; Clougherty et al. 2010),

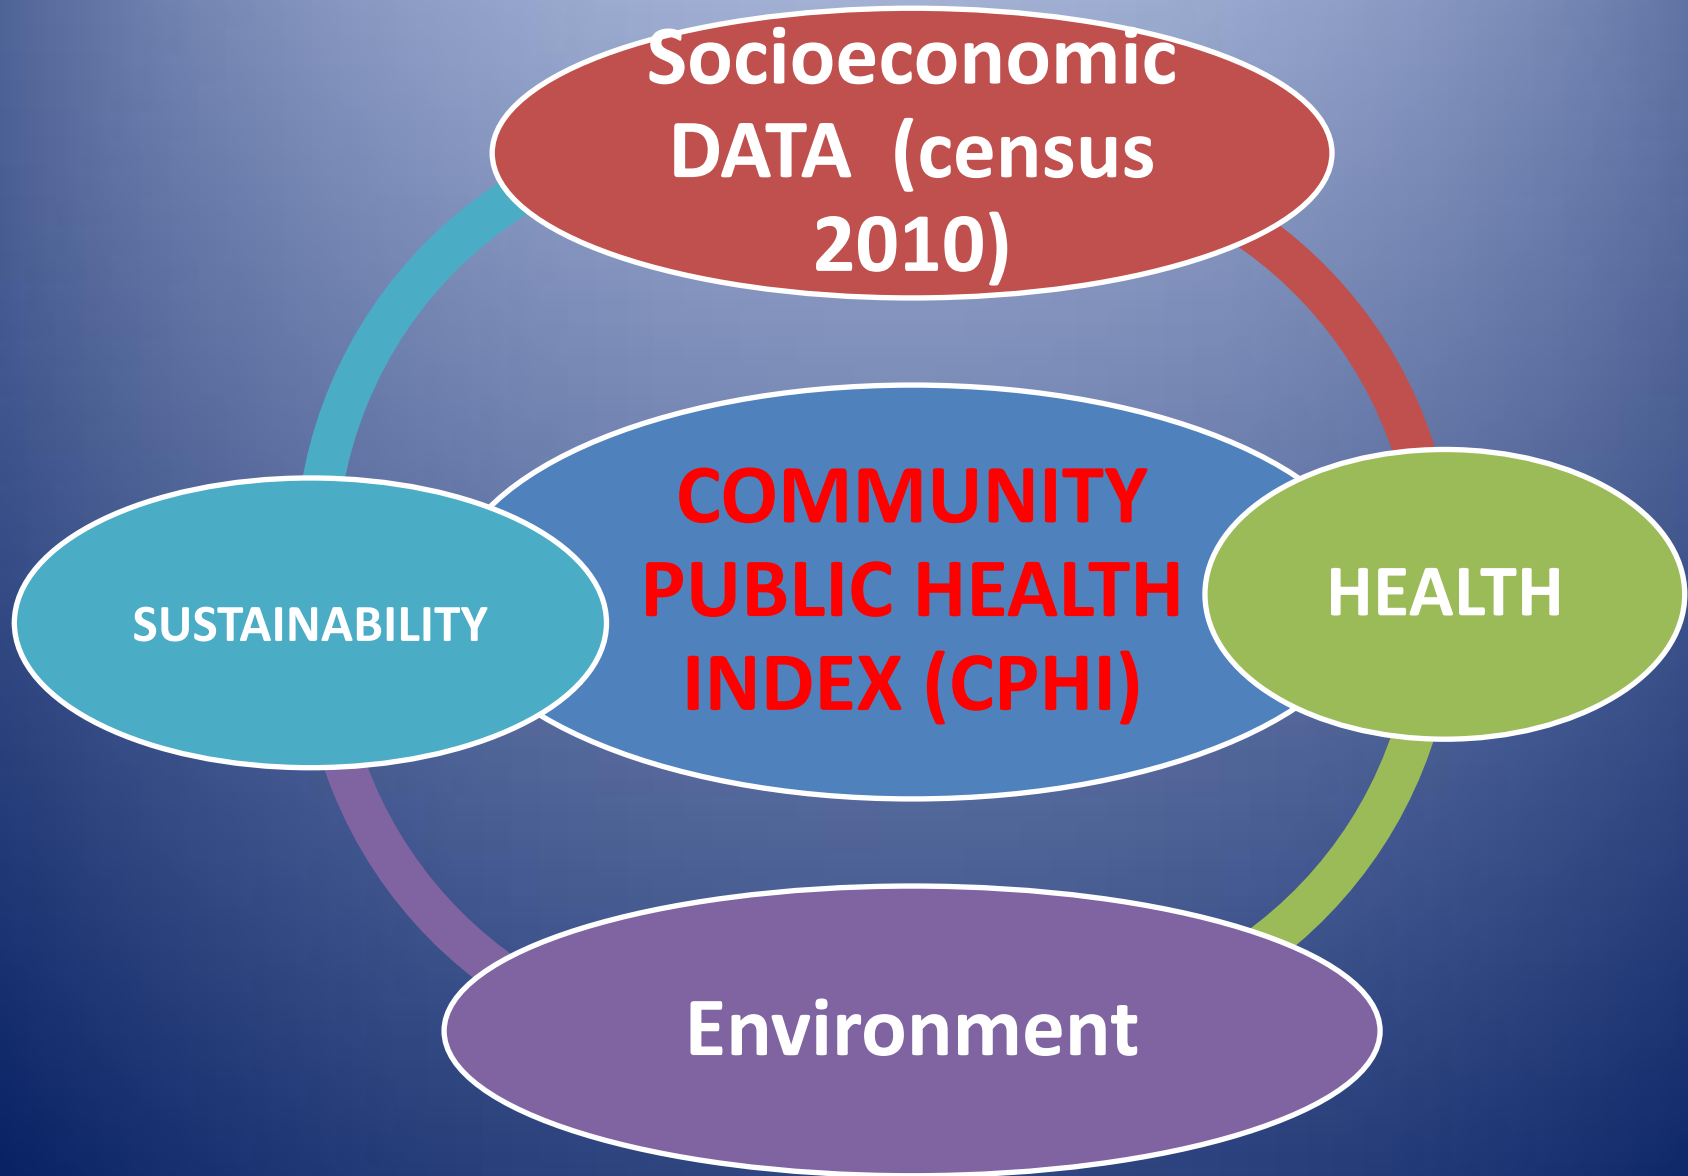

➤ **Physical and Social features of** communities or neighborhoods (Clougherty et al. 2007; Diez-Roux and Mair 2010). (NAS HIA 2011)

Approach

Derive an integrated community health index (ICHI) for 50 of the most populous US cities (representing over 43 million persons) using extant measures of

- Environmental
- Health /Public Health
- Sustainability
- Sociodemographic (2010 census)

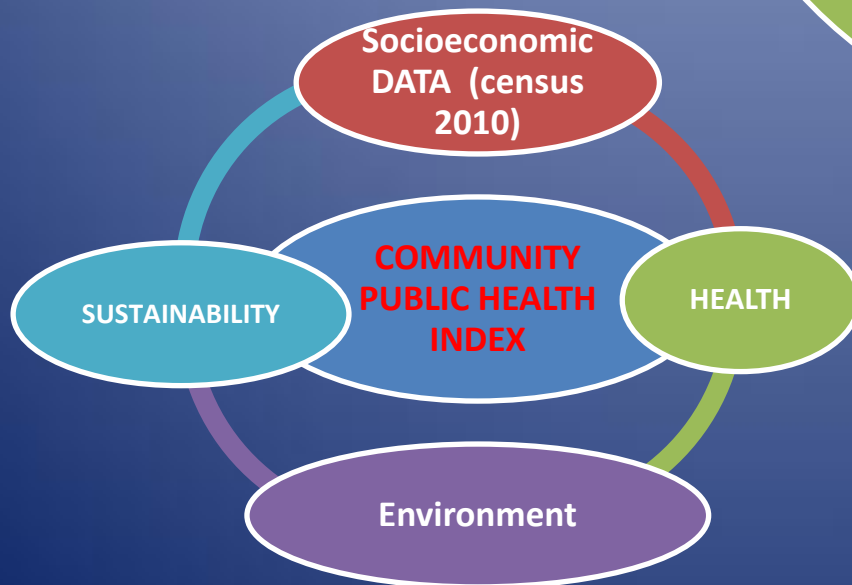

Integrated data across multiple domains -for a broader definition of community public health

HEALTH/Public Health

From Urban Environment Report --

www.earthday.net

HUMAN & PUBLIC HEALTH

variables considered

- Pediatric Asthma, rate (%)
- Adult Asthma, rate (%)
- Chronic Bronchitis, rate (%)
- Emphysema, rate (%)
- Cardiovascular Disease, rate (%)
- Diabetes, rate (%)
- % of Adults with Obesity
- Change in % of Adults with Obesity (1991 - 2001)
- Lung Cancer Deaths/100,000 Men, by county (1999-2003)
- Lung Cancer Deaths/100,000 Women, by county (1999-2003)
- DC Obesity Trends U.S. Adults Behavioral Risk Factor Surveillance System
- Prevalence Rate (1992)
- CDC Obesity Trends U.S. Adults Behavioral Risk Factor Surveillance System
- Prevalence Rate (1997)
- CDC Obesity Trends U.S. Adults Behavioral Risk Factor Surveillance System
- Prevalence Rate (2003)
- % of Adults Lacking Healthcare Insurance, ages 18 -65 (2001)
- Infant Mortality Rate (2002)
- Number of Cancer Deaths per 100,000 people (2002)
- Cost of Living:
 - % of People without Health Insurance Coverage by State (2003-04 Average)
 - % of People without Health Insurance Coverage by State (2004-05 Average)
 - Rate of Change in People without Health Insurance Coverage, between 03-04 and 04-05
 - Change in People without Health Insurance Coverage, between 03-04 and 04-05
- Number of small, local, sustainable food sources: Farms
- Number of small, local, sustainable food sources: Farmers' Markets
- Number of small, local, sustainable food sources: Restaurants
- Number of small, local, sustainable food sources: Groceries
- Number of small, local, sustainable food sources: Other
- Cost of Living: Food

Averages mean scores for

➤ **AIR QUALITY**

➤ **TOXICS & WASTE**

➤ **DRINKING & SURFACE WATER Quality**

AIR QUALITY variables considered

- Sulfur Dioxide (SO₂) Released, Tons (2002)
- Nitrogen Oxides (NO_x) Released, Tons (2002)
- Carbon Dioxide (CO₂) Released, Tons (2002)
- Mercury Released, Pounds (2002)
- High Ozone Days, Annual # of, Weighted Average (2001-2003) (Not Available)
- Short-term Particle Pollution Weighted Average, 24 Hour (2001 - 2003)
- Year-Round Particle Pollution - Pass/Fail (2001 - 2003)
- High Ozone Days - Grade (2002 - 2004) SCORE (Not Available)
- Short-term Particle Pollution Grade (2002 - 2004)
- Year-Round Particle Pollution - Pass/Fail (2002 - 2004)
- EPA Ambient Carbon Monoxide (CO) (8-hr ppm)
- EPA Ambient Lead (Pb) Q Max (ug/m³) SCORE (Not Available)
- EPA Mean Ambient Nitrogen Dioxide (NO₂ ppm)
- EPA Larger Particle (PM₁₀) 24-hr (ug/m³)
- EPA Mean Ambient Sulfur Dioxide (SO₂ ppm)
- EPA Days Over 100 AQI (Warning Level)
- «

TOXICS & WASTE

variables

Overall Toxics Rank

- Cumulative Cancer-Causing Chemical Releases by State
- Cumulative Developmental Toxicant Releases by State Cumulative
- Reproductive Toxicant Releases by State
- Cumulative Suspected Neurological Toxicant Releases by State
- Cumulative Suspected Respiratory Toxicant Releases by State
- Dioxin Releases by State
- Number of Superfund **Sites** in County
- Municipal Solid Waste Generation, State Average, tons/person (1997)
- Recycling Rate (1997)
- Municipal Solid Waste Generated by state, tons/person (2004)

•Municipal Solid Waste Recycled by state (2004)

•% Municipal Solid Waste to Waste-to-Energy (2004)

•% Change in Municipal Solid Waste Generated (1997 to 2004)

•% Change in State Recycling Rate (1997 to 2004)

DRINKING & SURFACE WATER QUALITY

DRINKING WATER QUALITY

- Tap Water Quality & Compliance
- Right to Know Report, What's in your Tap Water
- Drinking Water Source Protection
- % of Watershed Units Assessed as Impaired or Threatened
- % of Watershed Units Not Assessed
- U.S. Census Annual Rainfall, inches (1961-1990)
- Average # of Days with Precipitation of .01 Inch or More to 1998, Annual
- Snow & Ice Pellets thru 1998, Annual inches

• WATER WITHDRAWN

- Fresh Water Withdrawn - Per capita, million gallons/day
- Ground Water, million gallons/day
- Surface Water, million gallons/day
- Irrigation, million gallons/day
- Public Supply, million gallons/day
- Industrial, million gallons/day
- Thermo-Electric, million gallons/day
- Fresh Water Consumption, million gallons/day

WATER POLLUTION SUMMARY

- Total Contaminants Detected
 - Contaminants Detected, Over Health-Based Limits
 - Agricultural Pollutants Detected
 - Agricultural Pollutants Detected, Over Health-Based Limits
 - Sprawl and Urban Pollutants Detected
 - Sprawl and Urban Pollutants Detected, Over Health-Based Limits
 - Industrial Pollutants Detected
 - Industrial Pollutants Detected, Over Health-Based Limits
 - Water Treatment & Distribution Byproducts Detected
 - Water Treatment & Distribution Byproducts Detected, Over Health-Based Limits
 - Naturally Occurring Contaminants Detected
 - Naturally Occurring Contaminants Detected, Over Health-Based Limits
- SCORE 5

• WATER HEALTH & TESTING SUMMARY

- Contaminants in Tap Water 5
- Contaminants in Tap Water, Above Health-Based Limits
- Contaminants Reported as Tested by this Water Supplier
- Regulated Contaminants Tested
- Unregulated Contaminants Tested

• WATER VIOLATION SUMMARY

- Total Violations
- Health Violations
- Monitoring Violations
- Reporting Violations

SUSTAINABILITY

Sustainlane

www.sustainlane.com

SUSTAINABILITY

Socioeconomic
DATA (census 2010)

COMMUNITY PUBLIC
HEALTH INDEX

HEALTH

Environment

Averages ranking across these variables

- water supply,
- waste management,
- metro congestion,
- metro transit ridership,
- Commute to work
- housing affordability,
- City innovation,
- natural disaster risk,
- knowledge base and communication
- land use planning
- energy and climate change policy
- green buildings,
- green economy
- access to local agriculture

Analysis

Compare (means and significance) across all variables using CPHI median as the basis for the t-tests)

Top 25th percentile/bottom 25th

Community Public Health Index (CPHI) ---
(mean of 3 indices)

- Sustainability
- Health
- Environmental

Higher SCORE OR RANKING IS
WORSE than a Lower

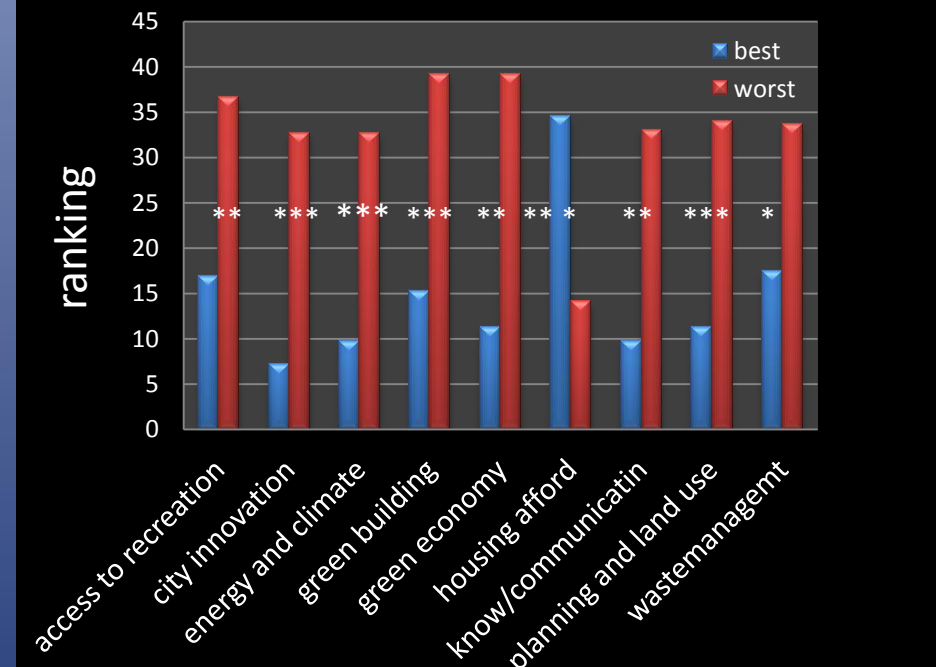

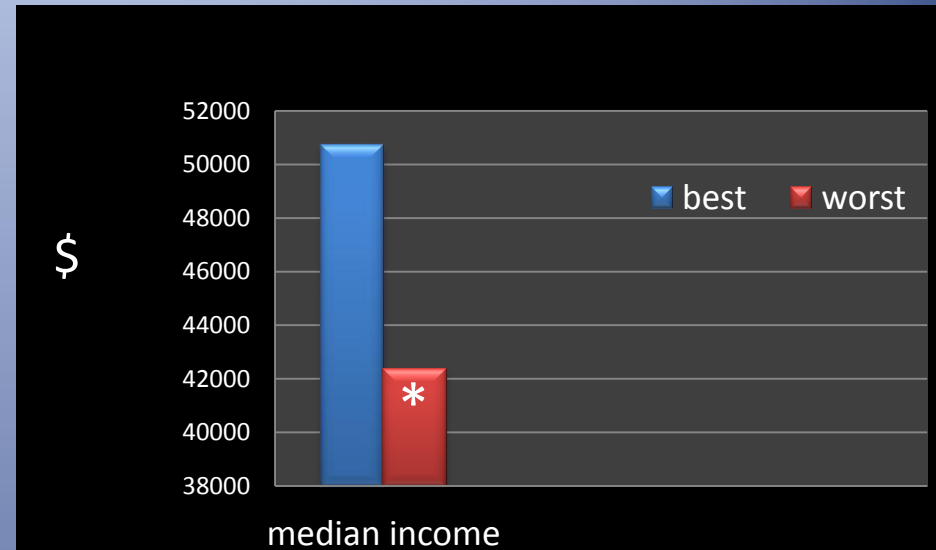

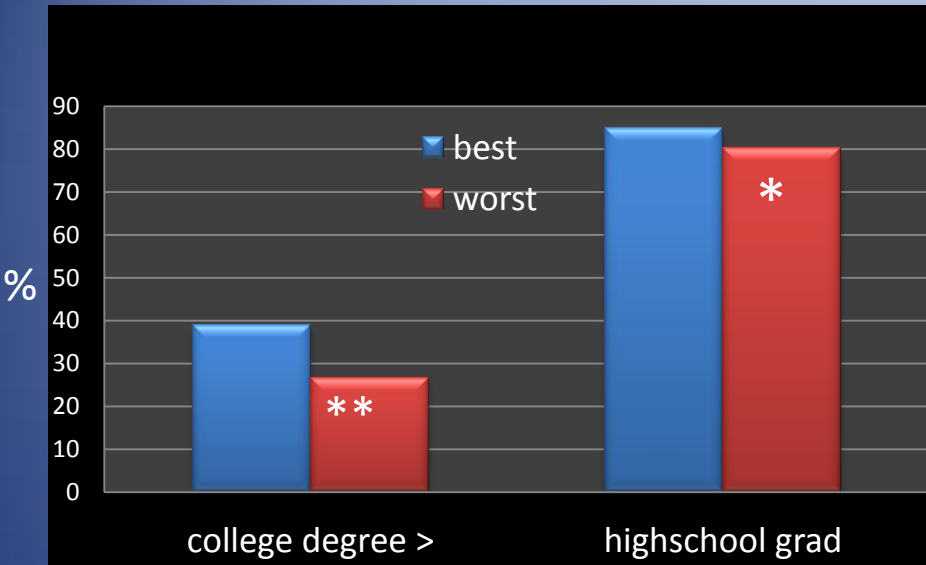

Significance levels noted by

* $<.05$

** $<.005$

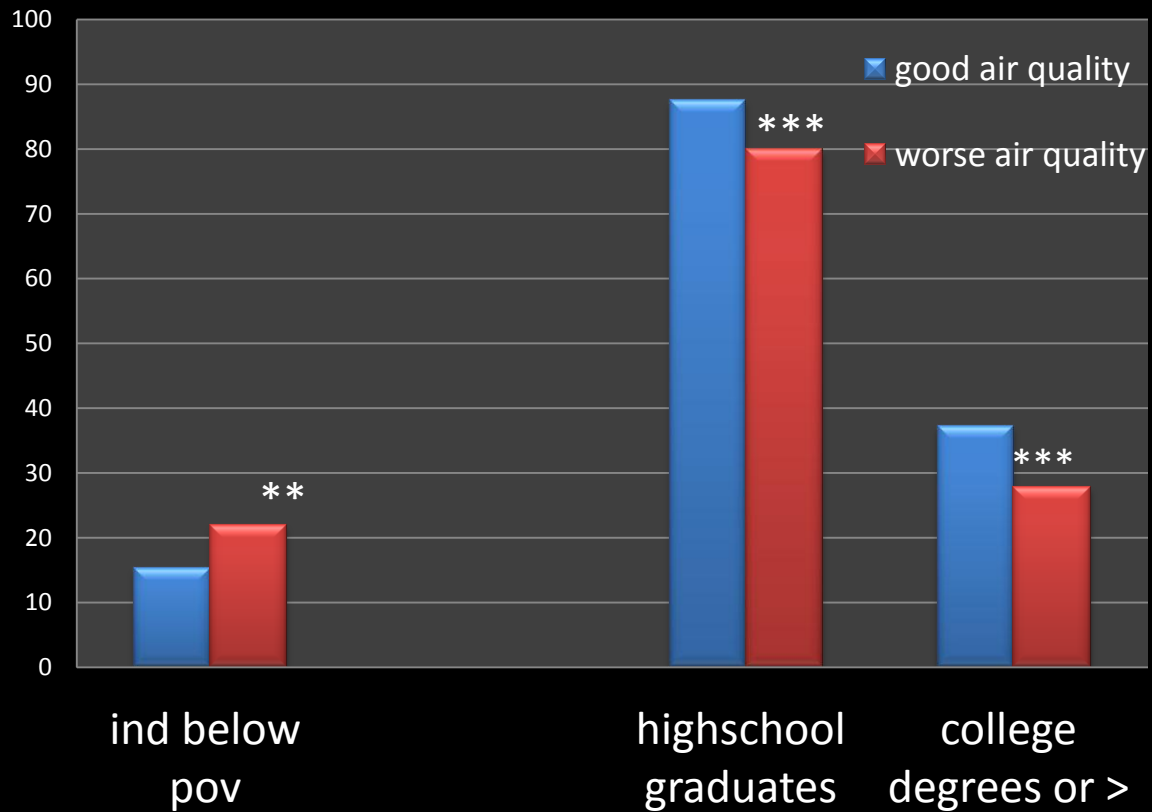

*** $<.0005$

CDC

score

%

Results

Cities with the “better” ICHI ---

- a higher % of persons with health insurance (20.1 vs 13.4 %; $p < 0.001$),
- a lower (better) green economy score (13.7 vs. 36.8; $p < 0.000001$)
- a lower toxic and waste score (2.4 vs. 3.5; $p < 0.001$) and
- a higher % of persons with college degrees (38.7 vs. 28.2%; $p < .005$)

Cities with a lower % of individuals below the poverty level (highest 25th percentile) compared to cities with higher percentages of people below the poverty level (lowest 25th percentile)

- a lower (better) score for toxic and waste generation (2.85 vs. 3.48; $p < .005$)
- higher % of high school graduates (87.0 vs. 78.3%; $p < .0005$)
- Greater access to recreation opportunities (2.91 vs. 3.54; $p < .005$)

SUMMARY

Integration and evaluation of diverse data

- Reveals important inter-relationships between health, environmental and sustainability metrics
- Taken together the integrated community metrics and simple approach provide a framework that promotes the communication and collection of information needed to implement policies that promote healthy and sustainable communities
