Introduction

Interest in healthy lifestyle and sustainable foods led to the development of plant-based meat analogues in many countries. However, not all countries are equally willing to reduce meat consumption. Local dietary habits, cultural values, and economic factors influence the willingness of consumers to adopt these alternatives.

Aim

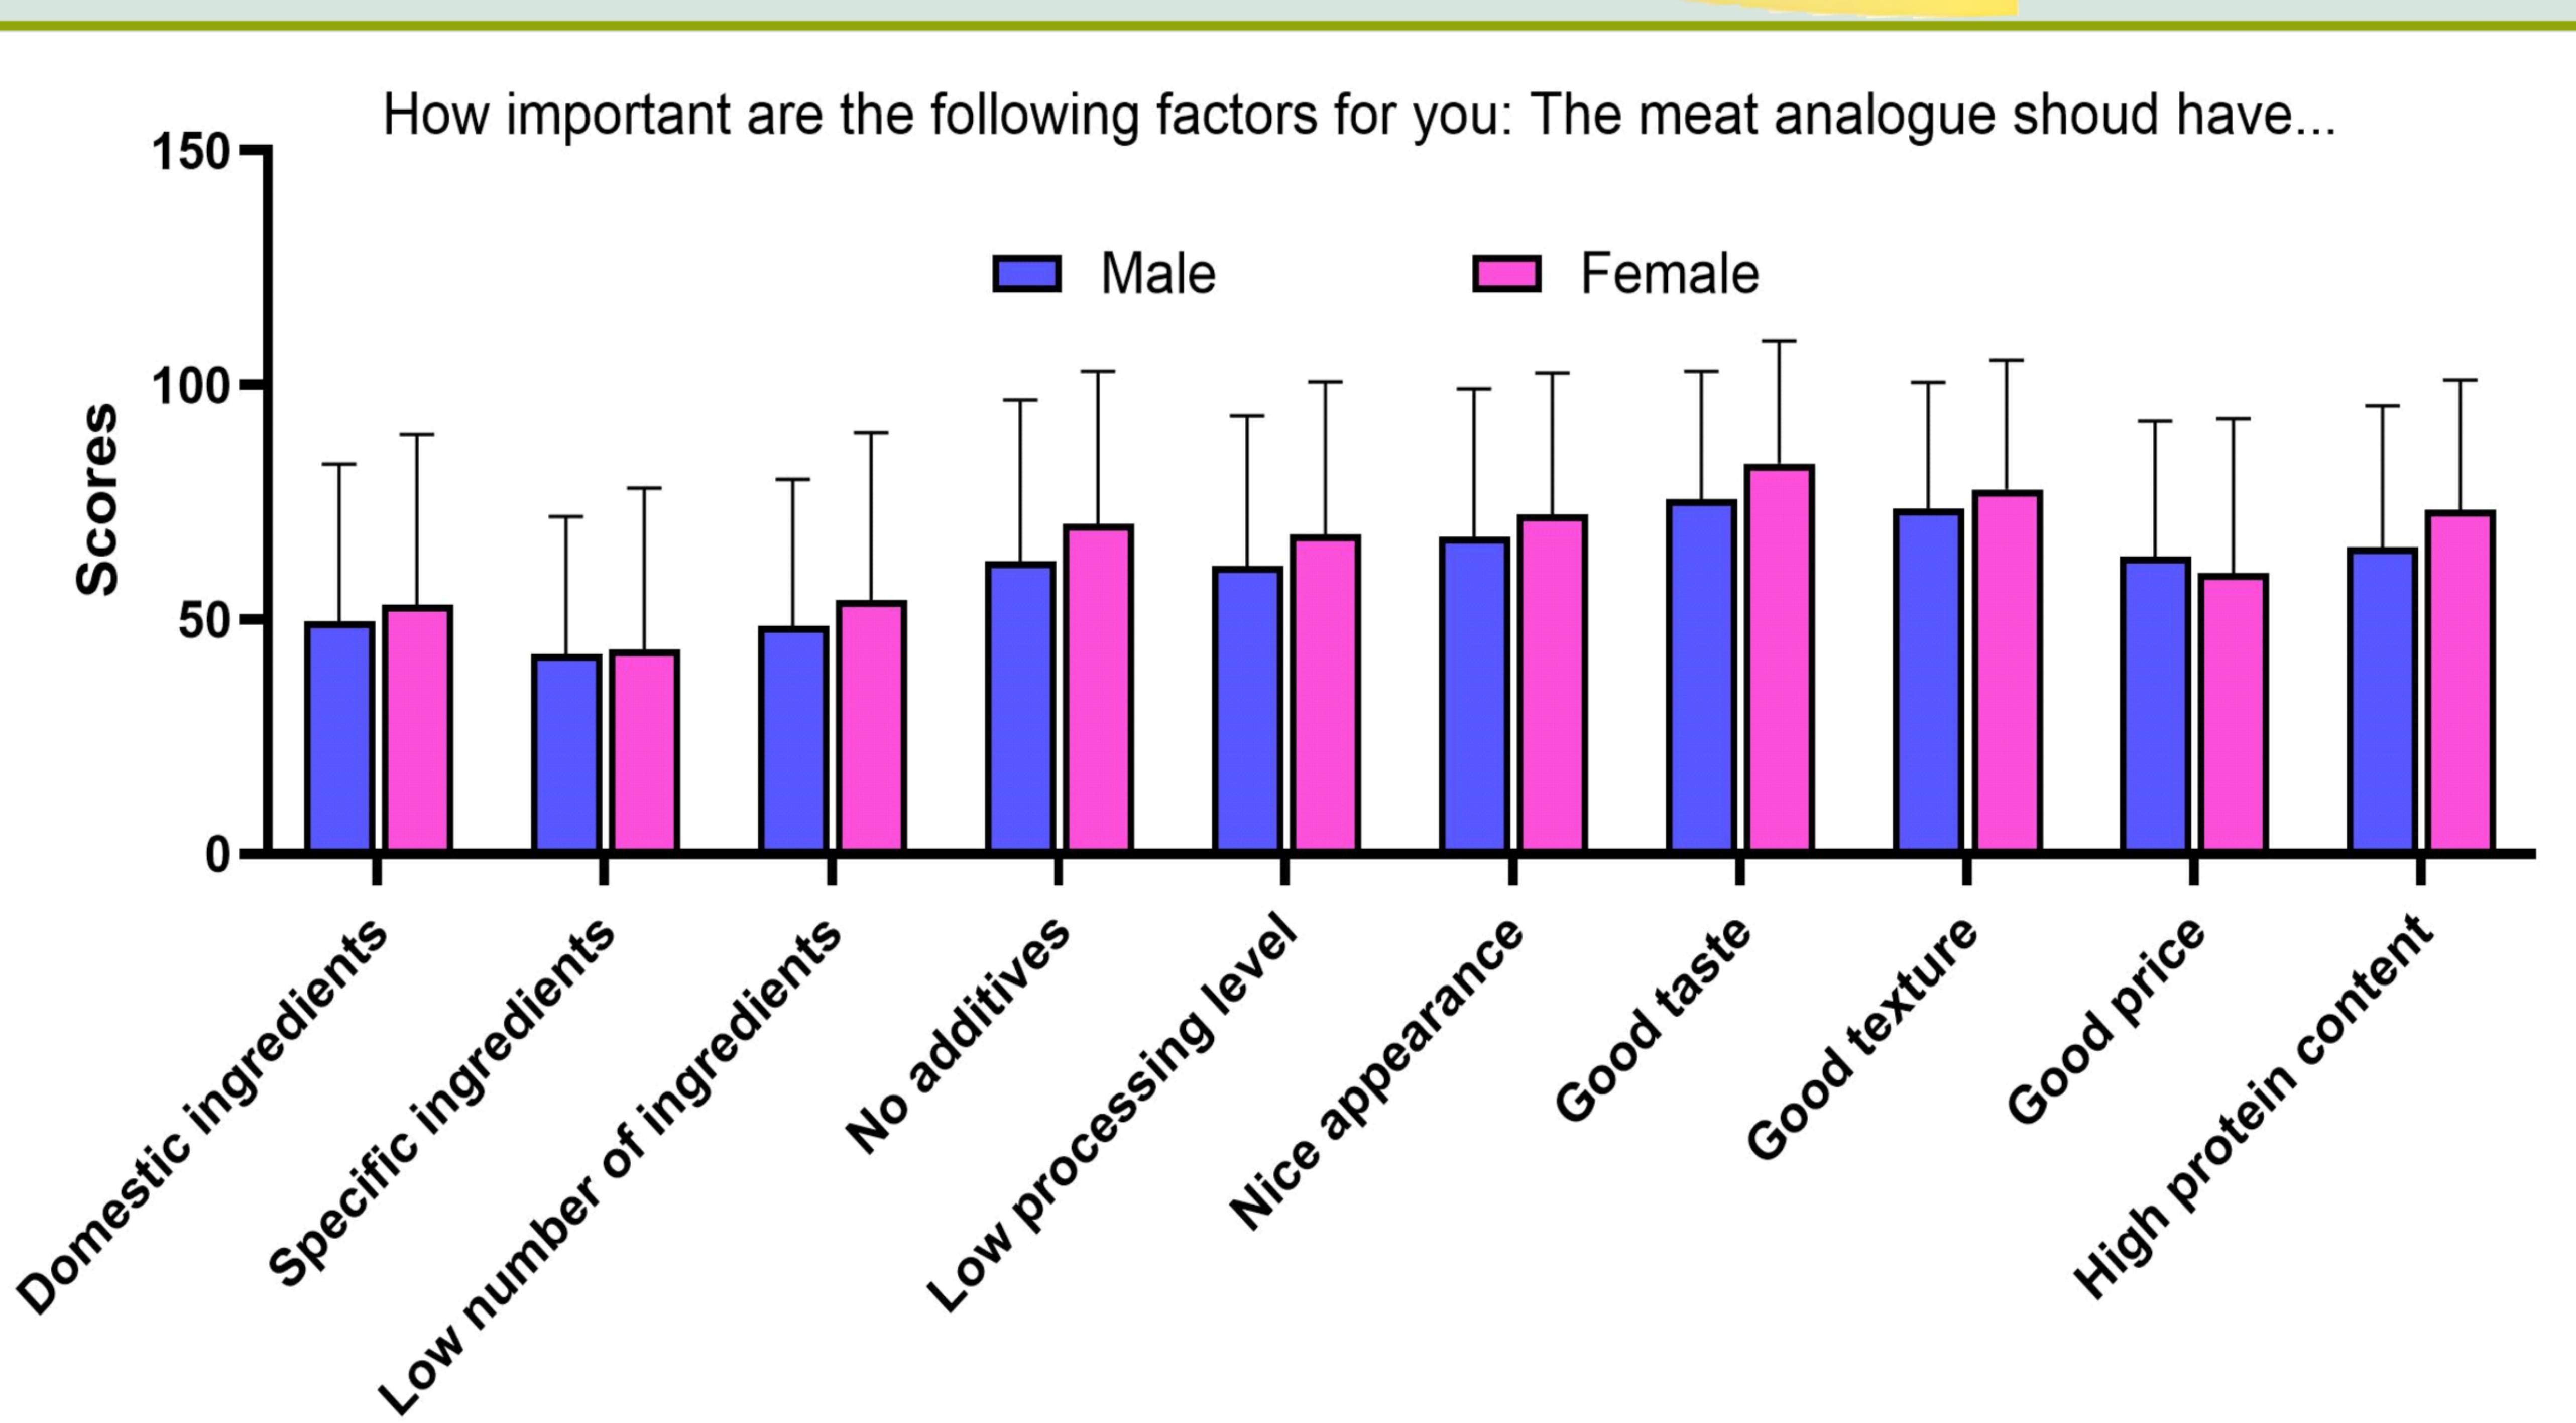

Examined acceptance of meat analogues by consumers in Ukraine.

Results

Both male and female participants ranked good taste and texture as the most important factors, while the presence of specific ingredients was ranked as the least important.

IMPORTANT
● Taste
● Texture
LESS
● Specific ingredients

Methods

The participants (n=360, Age of 19-66) were asked to evaluate agreement with several statements by giving the scores from 1 to 100. The statements included general interest in meat analogues, and factors of importance when choosing meat analogues as:

- Presence of additives
- Attractive appearance
- Taste and texture
- Protein content
- Price.

Meat analogue should be/contain...

Domestic ingredients

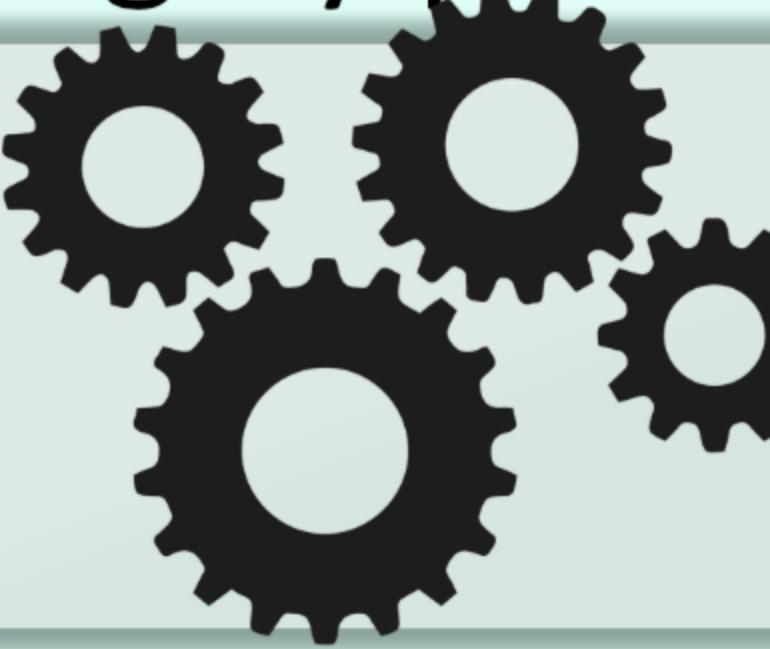

Specific ingredients

Not many ingredients

Not highly processed

Attractive appearance

Taste and flavour

Texture

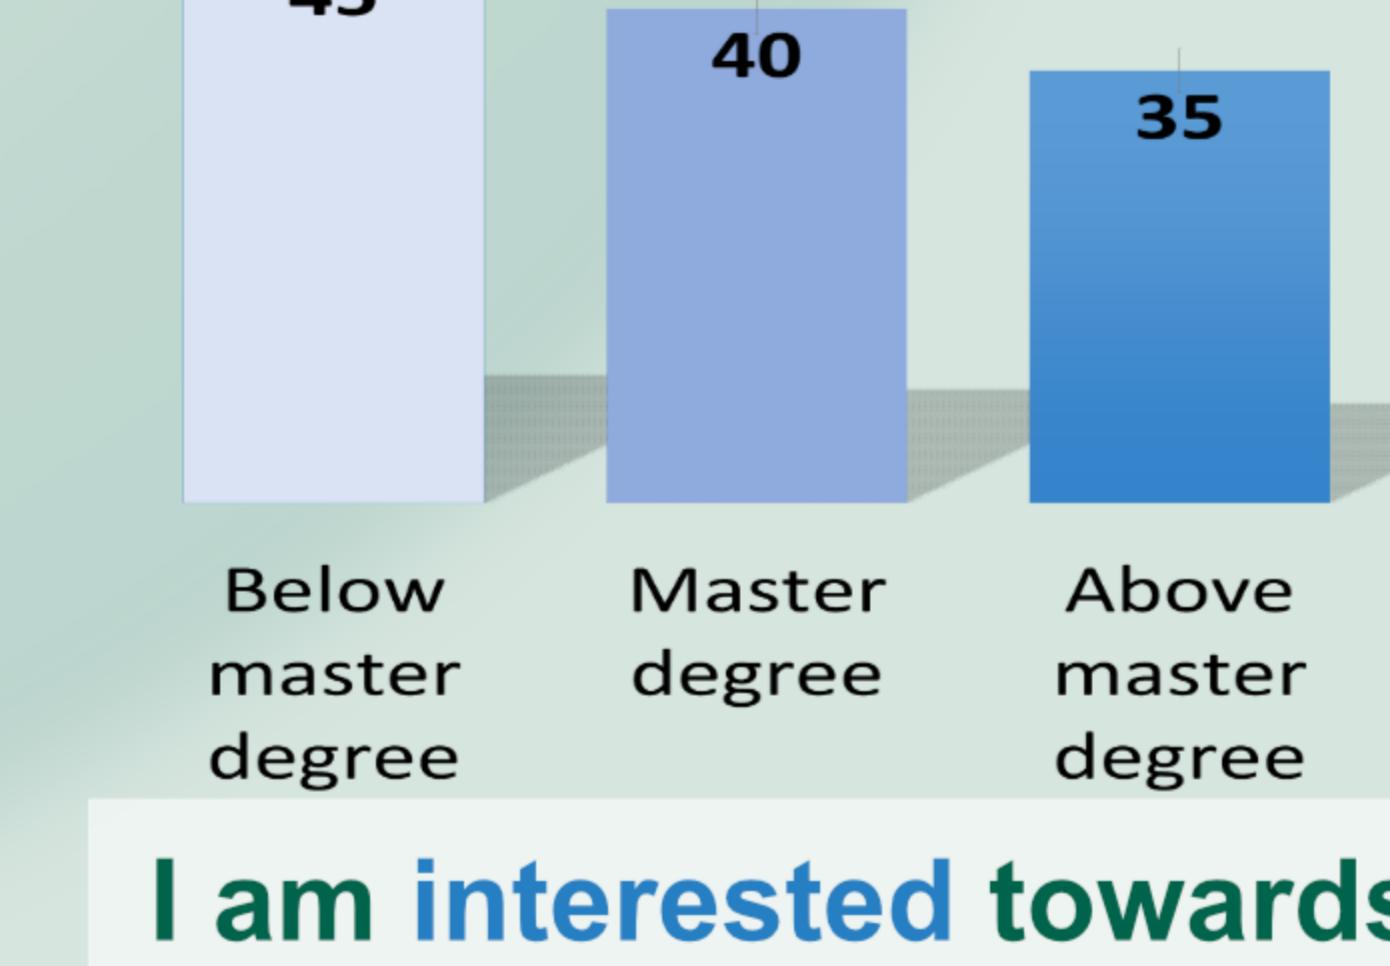

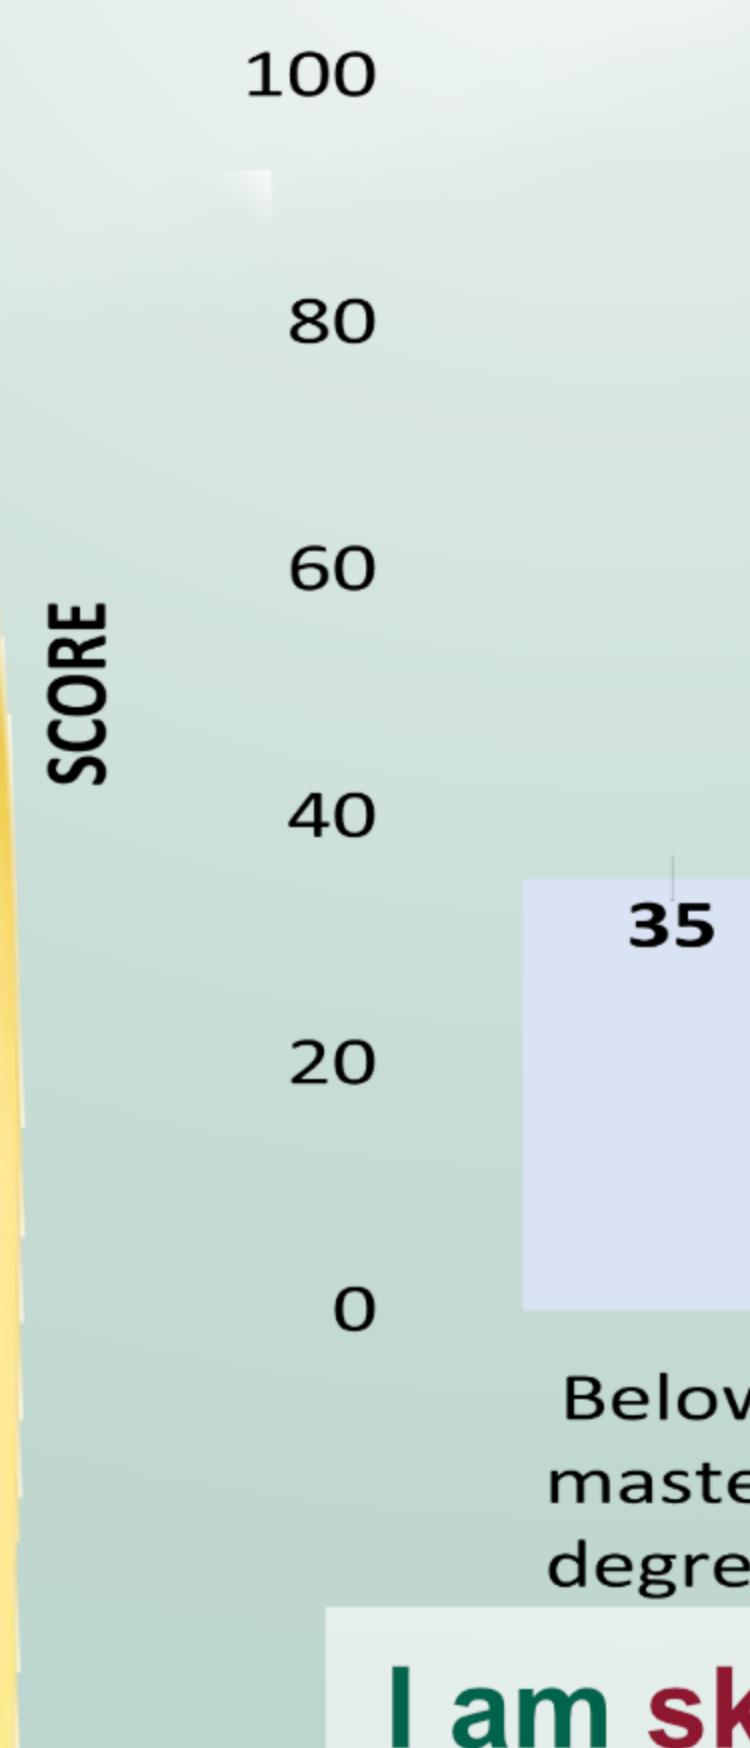

High in protein content

Not be expensive

How much do you agree?

Green meat
Fake
Plant products
Based on the product to imitate
Based on raw material
Plant protein products
Anti-meat
I do not know
I do not care

Conclusion

Interest in meat-based analogues did not differ between genders, but differed between the participants with different education.

This knowledge might contribute to the development of meat-based analogues on the Ukrainian market

Future work

Further research is needed to plan the development of meat-based analogues in the Ukrainian market, which would satisfy the consumer.
