mechanism

Hyperconjugation

X-ray structures of some derivatives of hindered arenesulfonic compounds.

$$\angle(\text{O}_1\text{SO}_2) \approx 118^\circ$$

$$2.30 < l_{(\text{O}_1 \cdots \text{H}_1)}, [\text{\AA}] < 2.70$$

$$2.36 < l_{(\text{O}_2 \cdots \text{H}_3)}, [\text{\AA}] < 2.59$$

$$2.48 < l_{(\text{O}_1 \cdots \text{H}_2)}, [\text{\AA}] < 2.66$$

$$2.57 < l_{(\text{O}_2 \cdots \text{H}_4)}, [\text{\AA}] < 3.80$$

Weak intramolecular C-H $\cdots$ O interaction.

Types of nucleophilic attack at the reaction center during arenesulfonyl chloride methanolysis. a. axial attack; b. backside frontal attack.

Frontal nucleophilic attack at the hindered reaction center during arenesulfonyl chloride methanolysis

## Conclusions

- ❑ In methanol, ethanol, propanol an increase of electron withdrawing effect of  $-X$  in unhindered compounds leads to lower reactivity, contrary to the prediction for typical  $S_N2$  reactions. The kinetics of neutral *iso*-propanolysis of aromatic sulfonyl chlorides has shown the opposite tendency relative to unbranched alcohols.
- ❑ Sterically-hindered compounds ( $X=2,4,6\text{-Me}_3\text{-}$ ;  $2,6\text{-Me}_2\text{-4-}t\text{-Bu-}$ ;  $2,3,5,6\text{-Me}_4\text{-}$ ;  $2,4,6\text{-Me}_3\text{-3-NO}_2\text{-}$ ) show anomalous acceleration of the solvolysis reaction rate for all alcohols.
- ❑ X-ray analysis shown that the distance between the hydrogen atom of the *o*-alkyl group and the nearest oxygen of the sulfonyl group,  $l_{(\text{O}\cdots\text{H})}$ , is comparable to the length of typical hydrogen bonds (2.30-2.70 Å), *i.e.* weak intramolecular (C-H $\cdots$ O) interaction.
- ❑ *o*-alkyl groups limit the backside approach of the nucleophile whereby creating preconditions for a frontal attack on the sulfur atom, that may be the possible reason of the positive steric effect.

A word cloud of thank-you phrases in various languages, including Spanish, Arabic, Indonesian, Persian, Italian, and Chinese. The words are arranged in a roughly cross-like shape, with the English words 'THANK YOU' being the largest and most prominent. Other large words include 'GRACIAS', 'ARIGATO', 'SHUKURIA', 'BIYAN', and 'MERCİ'. The word 'YOU' is the largest word in the cloud. Other visible words include 'DANKSCHEEN', 'TASHAKKUR ATU', 'SUKSAMA', 'EKGHMET', 'GRAZIE', 'MEHRBANI', 'PALDIES', 'BOLZİN', 'GOZAIMASHITA', 'EFCHARISTO', 'KOMAPSUNIDA', 'MAARKE', 'YAQHANYELAY', 'TINGKI', 'SHUKRIA', 'JUSPAXAR', 'MAARKE', and 'MERCİ'. The words are in various orientations, some vertical and some horizontal.

**THANK YOU**
