# **An investigation into the possibilities and limitations of *in silico* absorption modeling: GastroPlus™ simulation of nimesulide oral absorption**

**Sandra Grbić  
Vladimir Lukić  
Ivan Kovačević  
Jelena Parojčić  
Zorica Đurić**

# *In Silico* Absorption Simulation

---

## **Implementation:**

- ❑ Formulation development
- ❑ Assessment of the influence of drug properties on oral drug absorption
- ❑ Prediction of food effects
- ❑ Prediction of drug-drug interactions
- ❑ Establishment of *in vitro-in vivo* correlation (IVIVC)
- ❑ Justification of biowaivers

# Gastrointestinal Simulation Technology

(GastroPlus™ software package, Simulation Plus Inc., Lancaster, CA, USA)

- Physiologically based absorption model
- Mathematical model
- Predictive model
  - Physiological parameters of animals or humans
  - Drug physicochemical and pharmacokinetic properties
  - Formulation properties of drug products

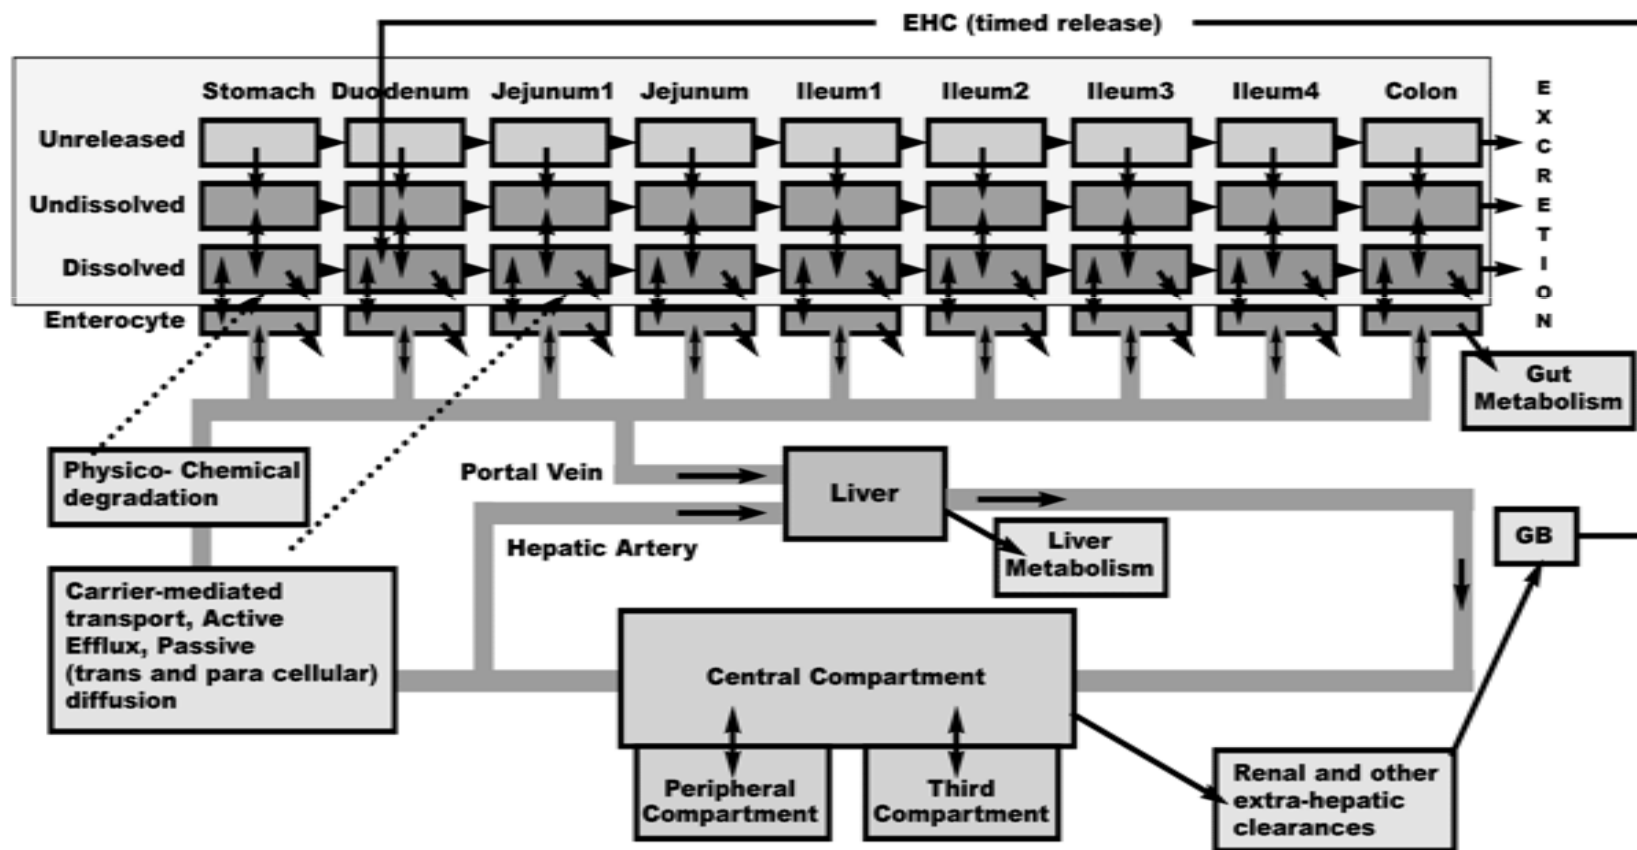

prediction

# ACAT

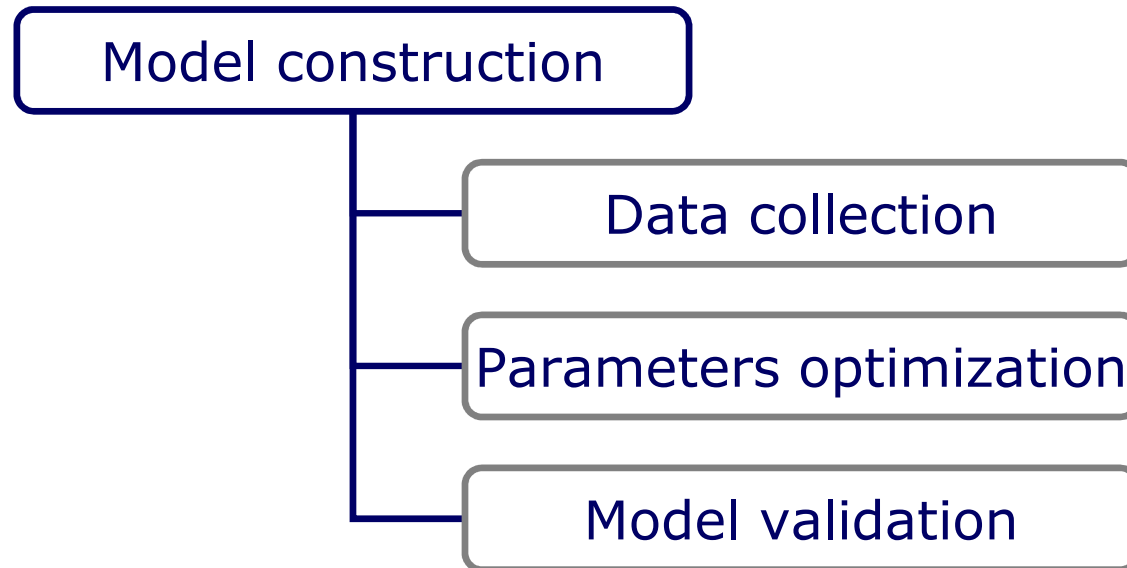

## *Advanced Compartmental Absorption and Transit Model*

# General Modeling and Simulation Strategy

---

The accurate prediction is often limited by the lack and/or inappropriate selection of reliable input data

# Model Drug: Nimesulide (NIM)

---

- BCS Class II drug
- Highly permeable<sup>a</sup>
- Weak acid; pK<sub>a</sub> 6.4<sup>b</sup>
- pH-surfactant-dependent solubility
- Tablet strength 100 mg; recommended dosage: twice daily
- After oral administration, NIM is rapidly and extensively absorbed<sup>c</sup>

<sup>a</sup> Meriani F et al. J Pharm Sci. 2004;93(3):540-52.

<sup>b</sup> Dellis D et al. J Pharm Biomed Anal. 2007;44:57-62;

<sup>c</sup> Bernareggi A. Clin Pharmacokinet. 1998;35:247-74.

# Model Presumptions

---

**Model 1**

influx transporters in the intestine influence NIM absorption

adjustment of the absorption scale factors (ASFs)

**Model 2**

pH-surfactant induced increase in NIM solubility *in vivo*

optimization of solubility and permeability values

## Summary of NIM Input Parameters

Parameter	Model 1	Model 2	Parameter	Model 1	Model 2
Molecular weight (g/mol)	308.31		Body weight (kg)	88 <sup>e</sup>	
logD (pH 7.4)	1.8 <sup>a</sup>	1.48 <sup>b</sup>	First pass extraction in liver (%)	0.1 <sup>h</sup>	/
pK <sub>a</sub>	6.4 <sup>b</sup>		Blood/plasma conc. ratio	0.668 <sup>c</sup>	1 <sup>g</sup>
Human jejunal permeability (cm/s)	2.225 × 10 <sup>-4 c</sup>	1.116 × 10 <sup>-4 a</sup> 2.002 × 10 <sup>-4 d</sup>	Unbound percent in plasma (%)	4.513 <sup>c</sup>	3 <sup>a</sup>
Dose (mg)	100		Clearance (L/h/kg)	0.039 <sup>h</sup>	0.028 <sup>a</sup>
Dose volume (ml)	200 <sup>e</sup>		Volume of distribution (L/kg)	0.226 <sup>h</sup>	0.14 <sup>a</sup>
Solubility at pH 4.5 (mg/ml)	0.007 <sup>f</sup>	0.017 <sup>b</sup> 0.030 <sup>d</sup>	Elimination half-life (h)	4.02	3.42
Mean precipitation time (s)	900 <sup>g</sup>		Simulation time (h)	15	
Diffusion coefficient (cm <sup>2</sup> /s)	0.757 × 10 <sup>-5 c</sup>		Dosage form	IR tablet	IR suspension/ IR tablet
Drug particle density (g/ml)	1.2 <sup>g</sup>				
Effective particle radius (µm)	25 <sup>g</sup> 5 <sup>d</sup>	25 <sup>g</sup>

# Conclusions

---

- ❑ Gastrointestinal simulation technology can be used for evaluation and prediction of oral drug absorption
- ❑ In order to obtain meaningful *in silico* modeling, the necessary input data have to be carefully selected and/or experimentally verified
- ❑ PSA is a valuable tool for identification of critical parameters affecting the rate and extent of drug absorption
