**Abstract.** This is the slideshow presentation of talk by Prof. Cristian R. Munteanu presented as part of the NEURODAT'21 training program funded by IBRO-PERC Soft Skills Training call of the International Brain Research Organization (IBRO) and the Pan-Europe Regional Committee (PERC). NEURODAT'21 is devoted to promote soft skills on entry level medicine and also STEMS area students interested on neurosciences. The talk includes two parts, part 1 focuses on Deep Learning models introduction and part 2 focuses on applications to medical diagnosis in Neurosciences. In this first part the talk introduces concepts as Deep Learning, Predictive Models, Artificial Intelligence, Neural Networks and Deep Neural Networks. Language note: **English-Spanish bi-lingual talk and English text.**

## Outlines

- ④ Prediction model
- ④ Artificial neuron
- ④ Machine Learning
- ④ Deep learning (DL)
- ④ DL application in Alzheimer

## MEDICAL ERRORS NATION'S THIRD BIGGEST KILLER IN 2013

# Prediction model

Linear vs non-linear

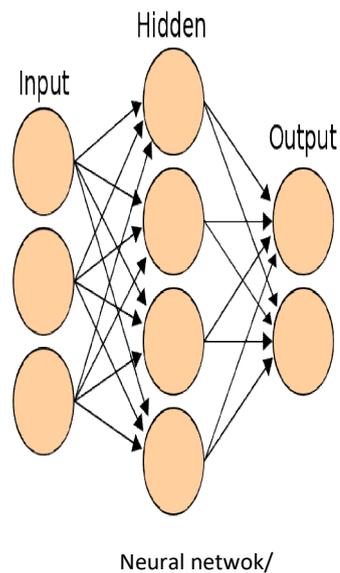

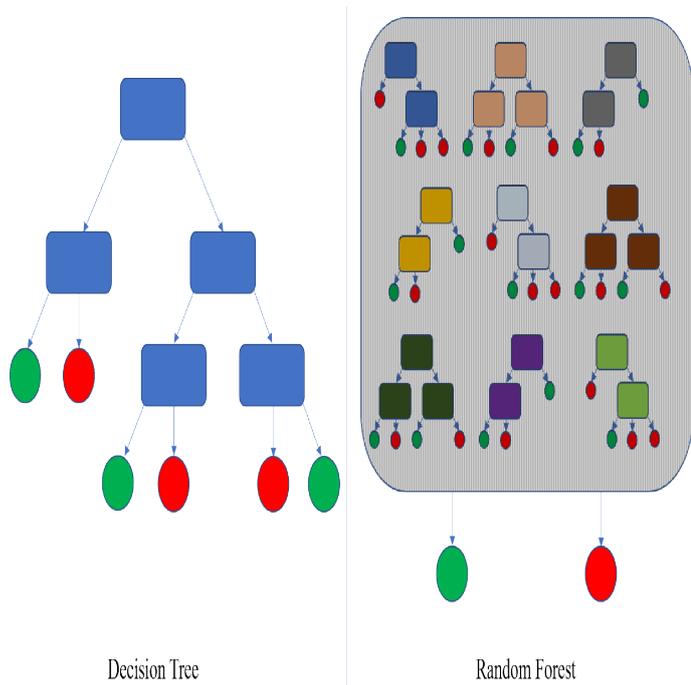

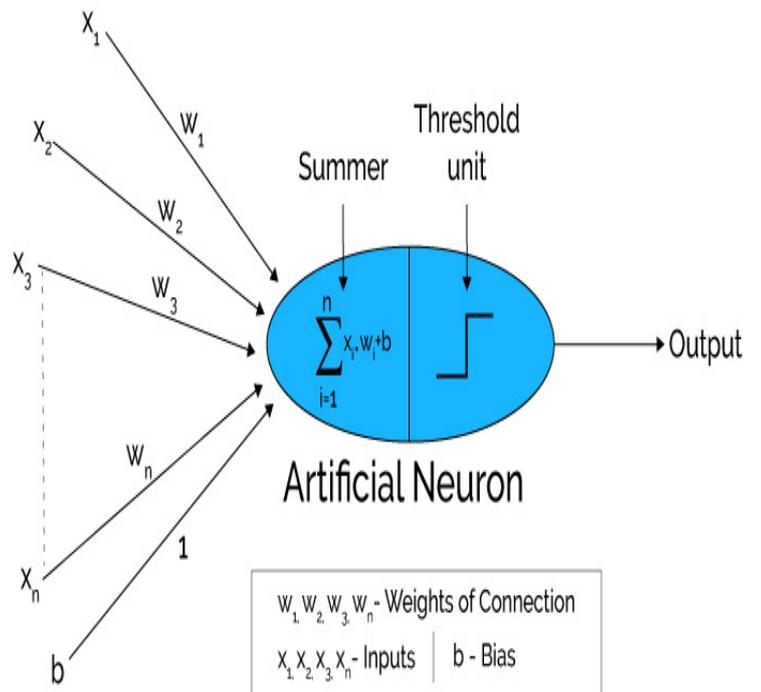

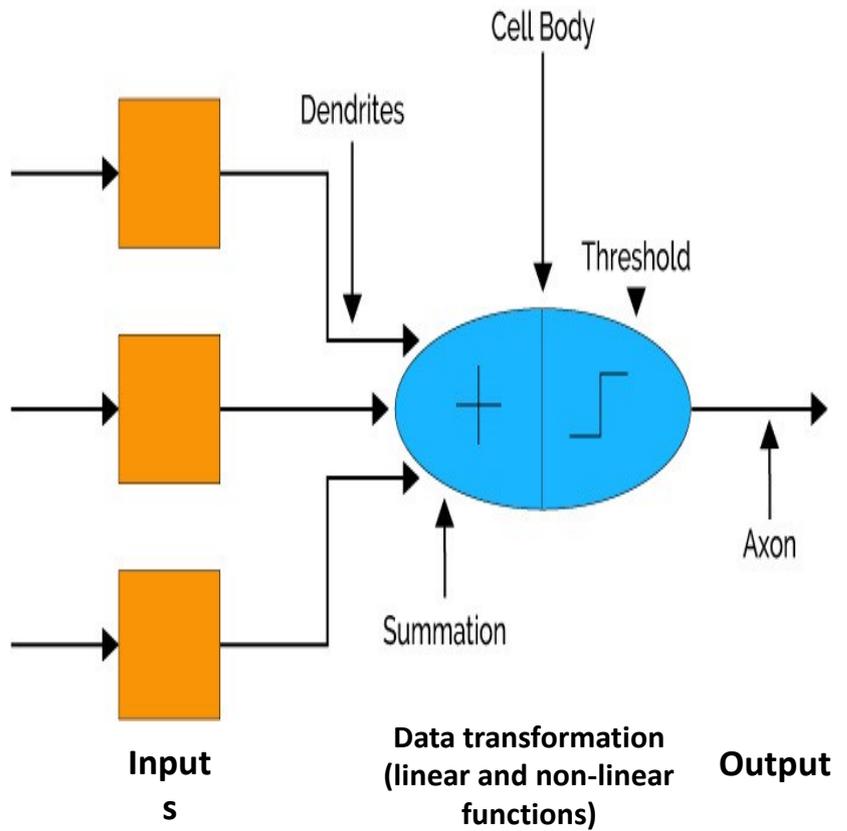

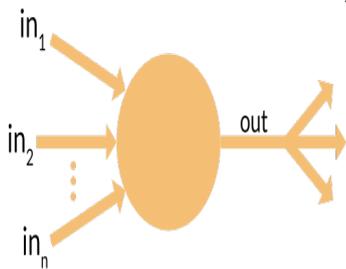

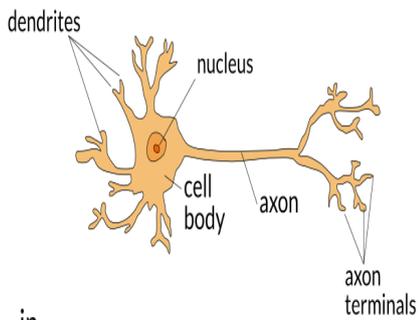

<https://commons.wikimedia.org/>

# ML methods

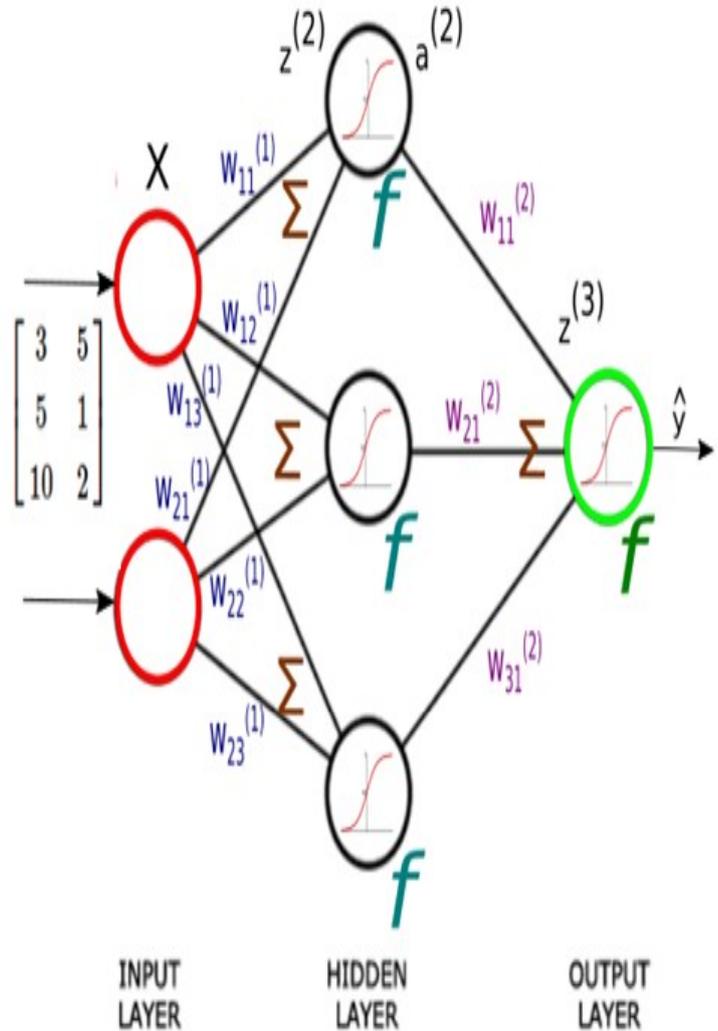

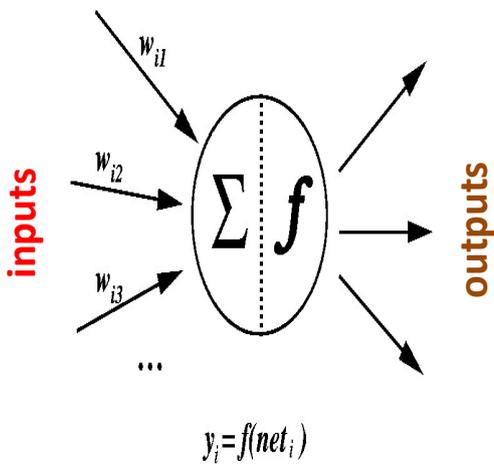

- Ⓢ Bayes networks
- Ⓢ Support vector machines
- Ⓢ Decision trees
- Ⓢ Random trees
- Ⓢ Neural networks
- Ⓢ .....

# Artificial Neural Network (ANN)

Fully Connected Neur

Artificial Neuron

Mathematical Formula

Outputs =  $f_{\text{nonlinear}}(f_{\text{linear}}(\text{inputs}, \text{weights}))$

Artificial Neural Network

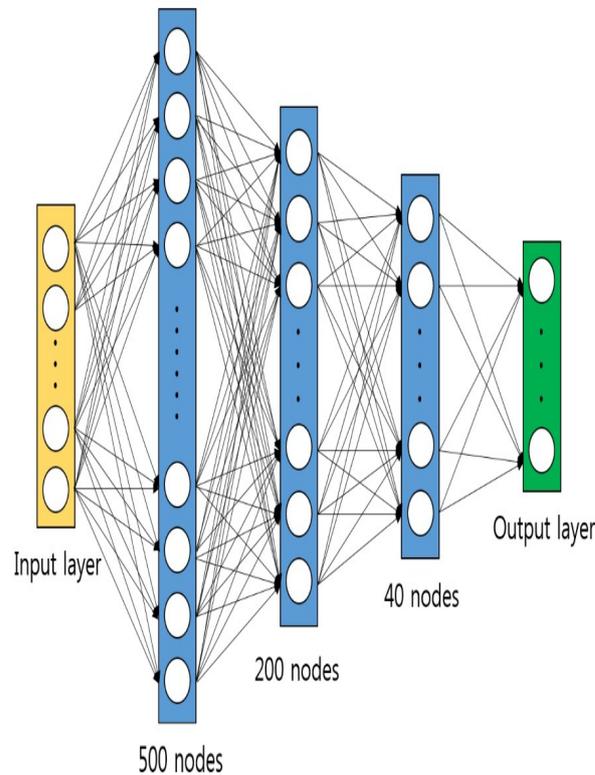

Complex Mathematical Formula

Nested Parametrized Function

Outputs =  $f_1(f_2(f_3(\dots)))$

Distortion of spatial dimensions!

# Deep Neural Nets = Approximation Function

Fully-connected net

GPU  
TPU  
NPU  
Big data  
Cloud computing

**Answer:** Yes, always! But it depends on dataset, time, computational power ... Remember, it is a supervised method! We need a dataset and to train a model.

**Question:** Is it possible to create a prediction model for this specific task?
