## INTRODUCTION

7.9 million children are born with birth defects worldwide annually, among them ~ 28 % are only congenital heart diseases (CHDs)[1]

#### Detection

~ 90 % patients don't have adequate access to essential diagnostics while ~ 40 % CHDs can be diagnosed by fetal sonography.<sup>[2]</sup>

#### Intervention

✓ 0.5 per million people get intervention, resulting ~ 40 % deaths & 4<sup>th</sup> contributor to Global Infant Mortality in low-med. income countries (LMICs).<sup>[2]</sup>
✓ Average cost of Cardiac Intervention: INR 2–5 Lakhs (USD 2400-6000)

Prevention

✓~ 30-40 % causal factors are either genetic or epigenetic, rest ~ 60 % is unknown.<sup>[3]</sup>
✓~ 74 % of Indians couldn't afford a healthy diet.

**Complete blood count (CBC)** is a routine diagnostic test in clinical settings & has been suggested to be predictive of cardiovascular diseases.<sup>[4]</sup>

#### **OBJECTIVE**

To find correlation of CBC indices with CHD and hospital status of patients

#### METHODOLOGY

- ✓ Study Design: Case-control retrospective observational study
- ✓ IEC Approved with Written Informed Consent
- ✓ Exclusion: Patients who had recent blood/platelet transfusion, iron supplementation, syndromic features, or any chronic disorders

<sup>#</sup>Statistical Tests: Student *t*-test, χ2 test and Multivariate logistic regression

#### **RESULTS & DISCUSSION**

#### Case-control and gender based association of CBC indices with CHD

Variables	Trend (P value w.r.t. controls)			<b>P</b> value within cases	
	All CHD Cases	Acyanotic CHD	Cyanotic CHD	Acyanotic Vs Cyanotic CHD	Males Vs Females
BMI	<b>↓</b> (0.000)	<b>↓</b> (0.000)	<b>↓</b> (0.000)	0.340	0.310
Pulse	<b>(0.000</b> )	<b>(0.000</b> )	<b>(0.000</b> )	0.520	0.620
SpO <sub>2</sub>	<b>↓</b> (0.000)	<b>↓</b> (0.001)	<b>↓</b> (0.000)	0.000	0.008
RBC	<b>↓</b> (0.920)	<b>↓</b> (0.000)	<b>(0.000</b> )	0.000	0.003
MCV	<b>↓</b> (0.000)	<b>↓</b> (0.000)	<b>↓</b> (0.004)	0.010	0.120
RDW	<b>(</b> 0.420)	<b>1</b> (0.740)	<b>(0.040</b> )	0.045	0.310
Hematocrit	<b>↓</b> (0.001)	<b>↓</b> (0.000)	<b>(0.000</b> )	0.000	0.040
Platelets	<b>(</b> 0.100)	<b>1</b> (0.030)	♦ (0.470)	0.002	0.910
Hemoglobin	<b>↓</b> (0.004)	<b>↓</b> (0.000)	<b>(0.000</b> )	0.000	0.020
MCH	<b>↓</b> (0.005)	<b>↓</b> (0.002)	♦ (0.350)	0.550	0.090
MCHC	<b>(0.010</b> )	<b>^</b> (0.001)	♦ (0.480)	0.001	0.510
Lymphocytes	<b>(0.000</b> )	<b>(0.000</b> )	<b>(0.000</b> )	0.860	0.180
PLR	<b>↓</b> (0.000)	<b>↓</b> (0.000)	<b>↓</b> (0.000)	0.002	0.290

*BMI:* body mass index;  $SpO_2$ : oxygen saturation; *RBC:* red blood cell; *MCV:* mean corpuscular volume; *RDW:* red cell distribution width; *MCH:* mean corpuscular hemoglobin; *MCHC:* mean corpuscular hemoglobin conc.; *PLR:* platelet-to-lymphocyte ratio;  $\uparrow$ : increased;  $\Psi$ : decreased. Significant P values are in **bold** font.

#### CONCLUSION

~ 20 % CHD patients require treatment within 1<sup>st</sup> year of life, hence early diagnosis play a vital role in the overall survival rate.
(The simplicity perpendicity properties of the second seco

✓ The simplicity, reproducibility, wide availability and cheaper cost of the CBC test shows its advantage for disease diagnosis in LMICs.

✓ *Replication in a larger cohort* can give a more validated conclusion & give an insight into blood biomarkers for prognostic evaluation of the disease.

## ACKNOWLEDGEMENT

The authors thank the patients who underwent cardiac treatment at **Sri Sathya Sai Sanjeevani International Hospitals-** *a Totally free of cost tertiary care centre*, for their participation.
