CONTEXT OF THE WORK

The work of our laboratory is focused on the synthesis of molecules with multiple therapeutic aim against malaria, leishmania, cancer and Alzheimer's disease, using the microwave technology in some steps of synthesis. For example, compounds synthesized in this work are encouraged by previous work^{1,2} and derived from pentamidine model. Two routes (route A and route B) lead to the β -amino benzimidazole acrylate derivatives.

RETROSYNTHESIS OF THE β -AMINO BENZIMIDAZOLE ACRYLATE DERIVATIVES

BIOLOGICAL RESULTS

Tested cancer cell lines

- Huh7-D12 cell (differential hepatocellular carcinoma) from human liver
- HaCaT cell (aneuploid immortal keratinocyte cell) from adult human skin
- Caco2 cell (epithelial colorectal adenocarcinoma) from human large intestine
- MDA-MB231 cell (invasive ductal carcinoma) from woman breast
- HCT116 cell (actively proliferating colorectal carcinoma) from human colon
- NCI-H727 cell (bronchial carcinoma) from human lung
- PC3 cell (prostatic carcinoma) from human prostate

Molecule of reference : Roscovitine 2
