

Dietitians' quality of life before and during the Sars-CoV-2 pandemic (Brazil, 2020)

Raquel Adjafre da Costa Matos; Rita Akutsu; Renata Puppim Zandonadi; Raquel Braz Assunção Botelho

Quality of Life

WHOQoL-BREF

Instrument to measure quality of life– OMS 1998.

Derived from WHOQoL-100.

It can be used in a variety of cultural settings.

Items evaluated in a five-point scale – Likert scale (1932):
1 – “totally disagree” ↔ “totally agree”

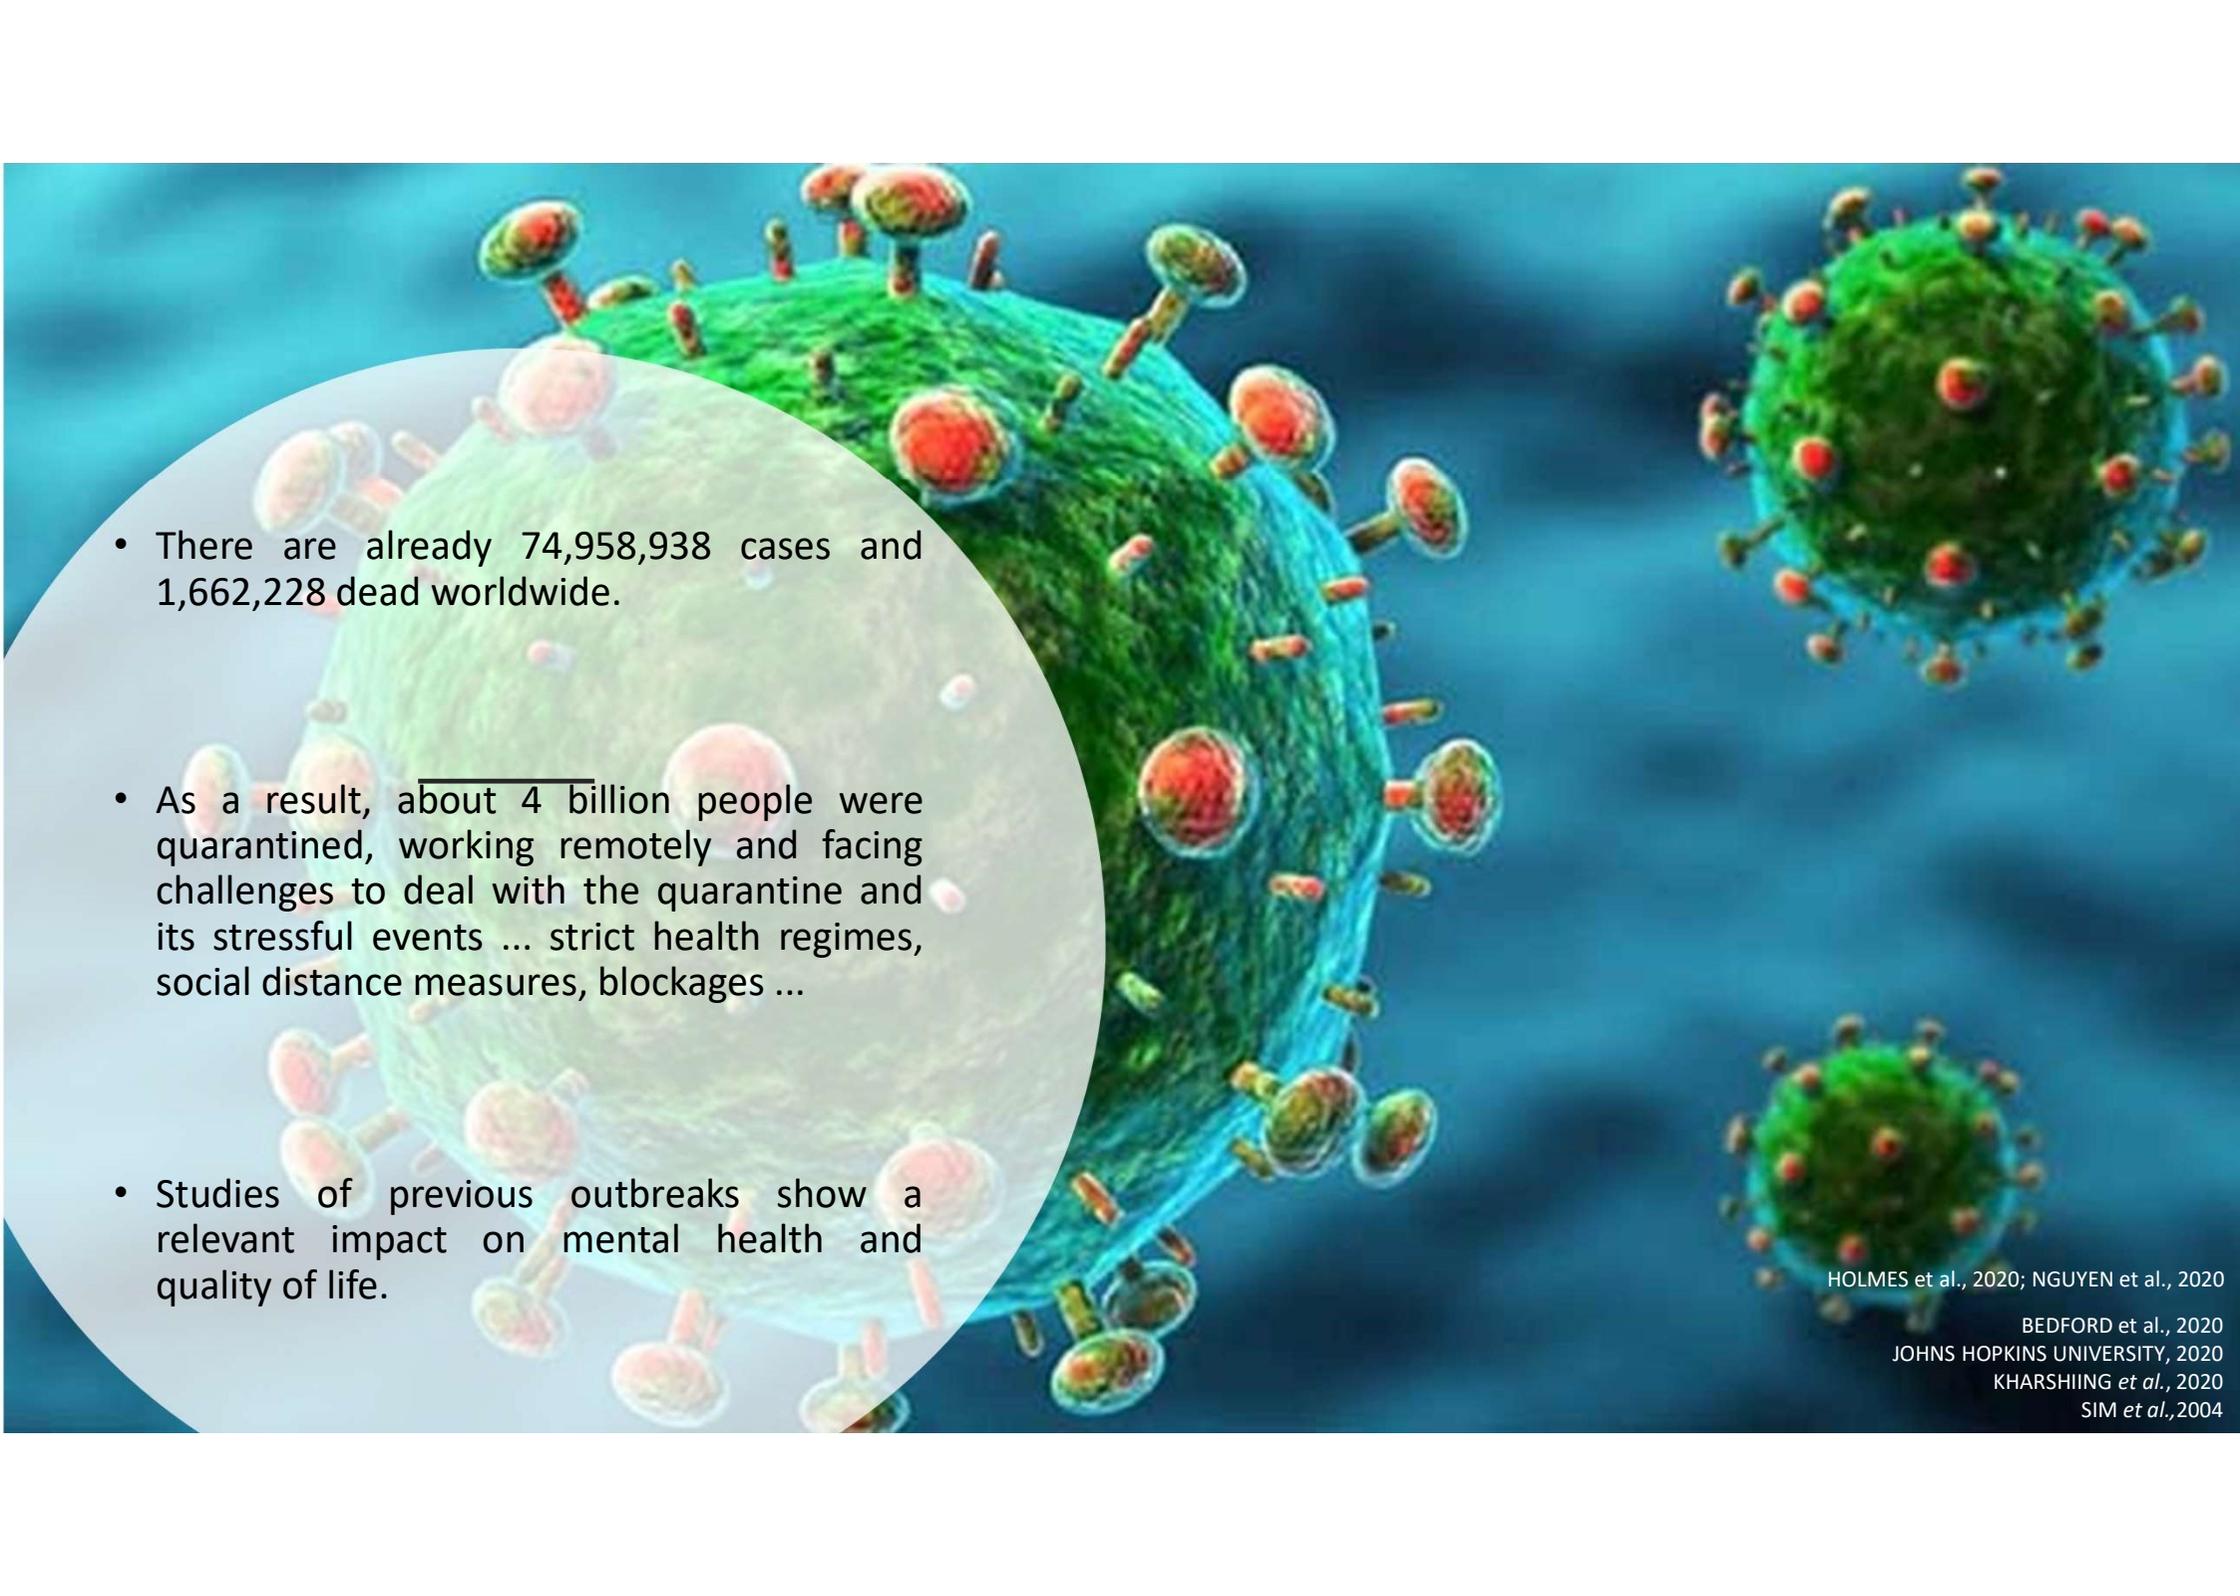

The domains evaluated are: PHYSICAL, PSYCHOLOGICAL,
SOCIAL RELATIONS AND ENVIRONMENT

Pandemic: Severe Acute Respiratory Syndrome
caused by Coronavirus 2 SARS-CoV-2

- First reported in December 2019 in Wuhan, China
- It quickly spread across the world and in March 2020 was declared a Pandemic
- It caused depletion of human, health and economic resources.
- The scientific community around the world seeks alternatives for treatment, cure and prevention.

- 
- There are already 74,958,938 cases and 1,662,228 dead worldwide.
 - As a result, about 4 billion people were quarantined, working remotely and facing challenges to deal with the quarantine and its stressful events ... strict health regimes, social distance measures, blockages ...
 - Studies of previous outbreaks show a relevant impact on mental health and quality of life.

HOLMES et al., 2020; NGUYEN et al., 2020

BEDFORD et al., 2020
JOHNS HOPKINS UNIVERSITY, 2020
KHARSHIING et al., 2020
SIM et al., 2004

Restrictive measures

- Psychological suffering
- Emotional disorders
- Panic
- Bad mood
- Exhaustion
- Stigma and xenophobia to those infected
- Irritability
- Rage
- Suicides ...

SARS-CoV-2

The mental health response to a pandemic depends on:

- clinical evidence
- media reports
- number of cases
- fatality rates
- the transmissibility of the disease
- isolation policies

—

And what is the
context of health
professionals in
this pandemic?

Frontline
professionals in
the fight against
SARS-CoV-2
need to be SAFE

Missing PPE
Too many patients
Increased workload / fatigue
Fear of infection
High risk of exposure
Excessive losses
Anguish over difficult decisions
Family isolation
Burnout

Quality of life health professional

Patient safety depends on the safety and health of the professional who takes care of him.

Constant changes and unclear safety protocols for healthcare professionals

More than 570 thousand infected health professionals and 2.5 thousand killed by COVID-19 in the Americas until 7/2/2020.

In the USA and Mexico - 1 in 7 cases of COVID is a healthcare professional

India: depression (47%), anxiety (50%) and low quality of life (45%).

Italy: 20% depression and 8% anxiety.

China: anxiety ranged from 23% to 44.6%, depression 50.4%.

The health of the health professional is one of the biggest challenges of this Pandemic

Objectives

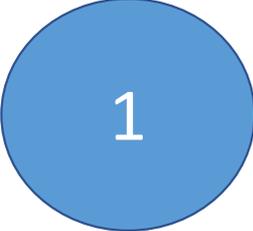

- To evaluate the quality of life of Brazilian dietitians before and during the SARS-CoV-2 pandemic.
- To characterize Brazilian dietitians working during the SARS-CoV-2 pandemic.

Participants

- Brazilian dietitians and residents in Brazil
- 129.134 professionals in Brazil
- Sample calculated considering an error (e) of 3% and a level of significance (α) of 5% = 1,059

HAIR, 2009

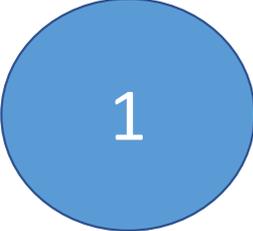

CFN – ESTATÍSTICAS, 2020

1

Sociodemographic characterization of the sample

- 
- region of Brazil,
 - sex,
 - age,
 - marital status,
 - children,
 - religion,
 - number of individuals living in the household,
 - family income,
 - schooling,
 - graduation time,
 - type of institution where you graduated,
 - service time,
 - occupation area,
 - type of company you work for.

1

COVID-19

- 
- Three questions about COVID-19 were also included:
 - Did you continue to work during the COVID-19 pandemic?
 - Have you tested positive for COVID-19? and
 - Did anyone in your family test positive for COVID-19?

2

WHOQoL-BREF

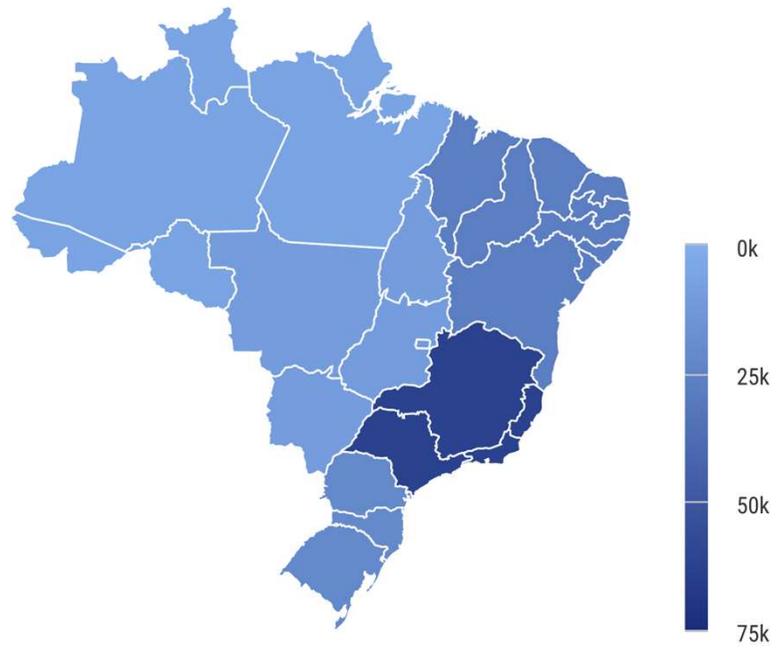

- OMS, 2011
- Fleck
- Escala Likert de 5 pontos

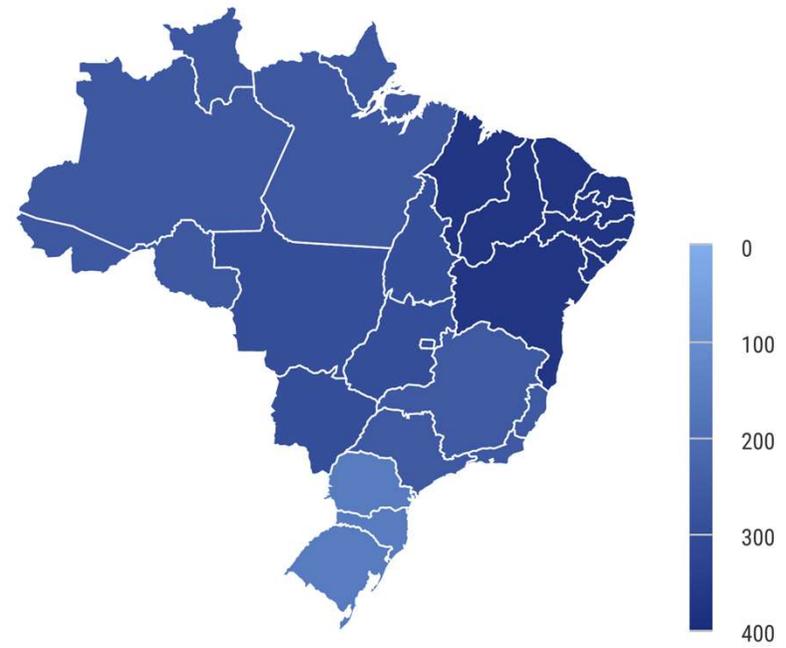

The application of the Instruments

- The volunteers received the survey link, the invitation to participate and the informed consent form
- GoogleForms® tool
- Applied in the period from May 26 to June 7, 2020
- Sent via email, messaging apps and social networks

Dietitians by region

Sample by region –
1,290 dietitians

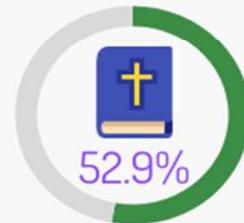

Who is the Brazilian dietitian?

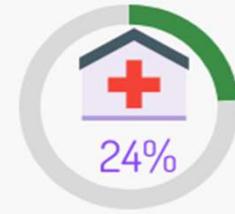

The Brazilian dietitian during COVID-19

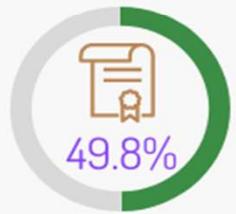

25 to 39 years

Catholic

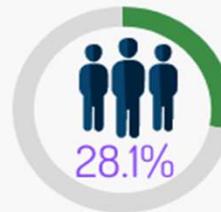

Clinic Area

Post-graduate

> 15 years

5-10 MW

Private universities

Autora: Raquel Adjafre

Schooling x Income

Dietitians

1 Undergraduates

35.9
%

2 Post-graduates

%

1st study on the quality of life of nutritionists AND comparing the period before and during the SARS-CoV-2 pandemic.

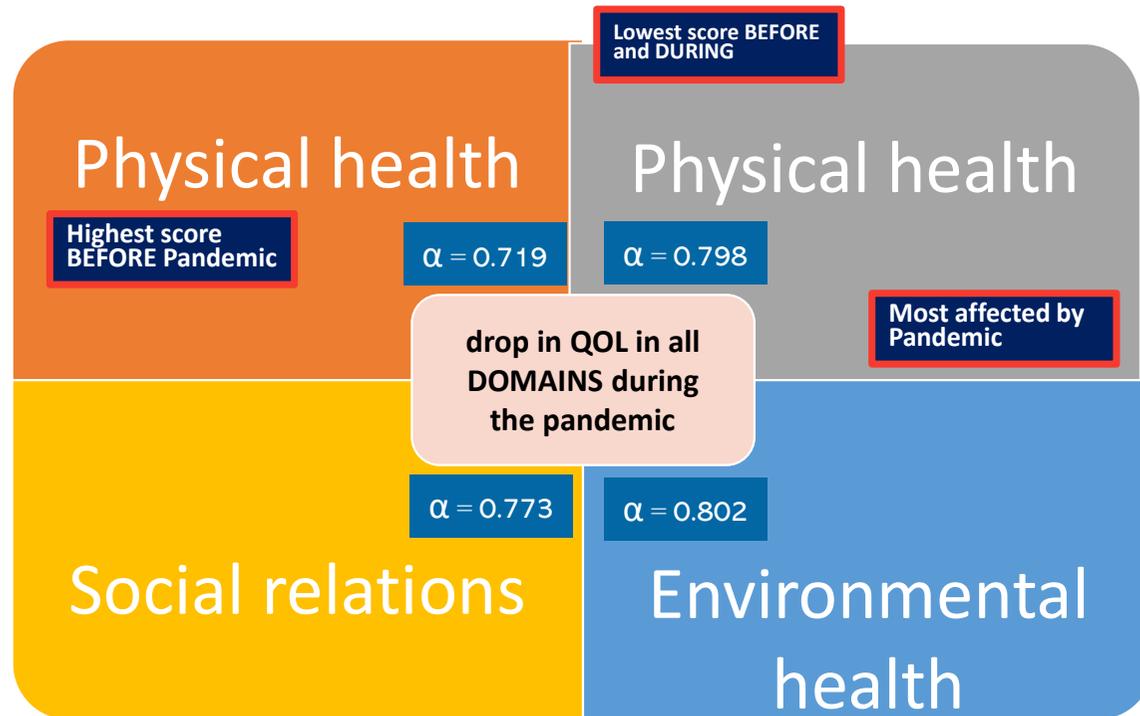

Statistical difference between ALL variables: WORST during Pandemic

it brought fear and risk of death, psychological pressure, fear of losing family members, social isolation, unemployment, and several other unexpected changes in normal life (CAO et al., 2020; LAI et al., 2020).

Quality of life of Brazilian nutritionists before and during the COVID-19 pandemic

Cronbach alfa = 0.925

Despite the studies by Sedikides (2010) and Souza et al. (2019) show otherwise

Before the pandemic

Not influenced QL

- Sex
- Having children
- Number of workplaces
- Where graduation took place
- Religion
- Area of work

HIGHER QL

- Master > undergraduated
- + 15 years of graduation > up to 5 years
- Income > 10MW

During the pandemic

Not influenced QL

- Sex
- Having children
- Number of workplaces
- Where graduation took place
- Religion
- Testing + for SARS-CoV-2
- Family member testing ++

Higher QL

- PhD
- Teaching area
- + 10 years of graduation > up to 2 years
- Income ↑ 5 MW > up to 5 MW
- Work remotely or with adaptations

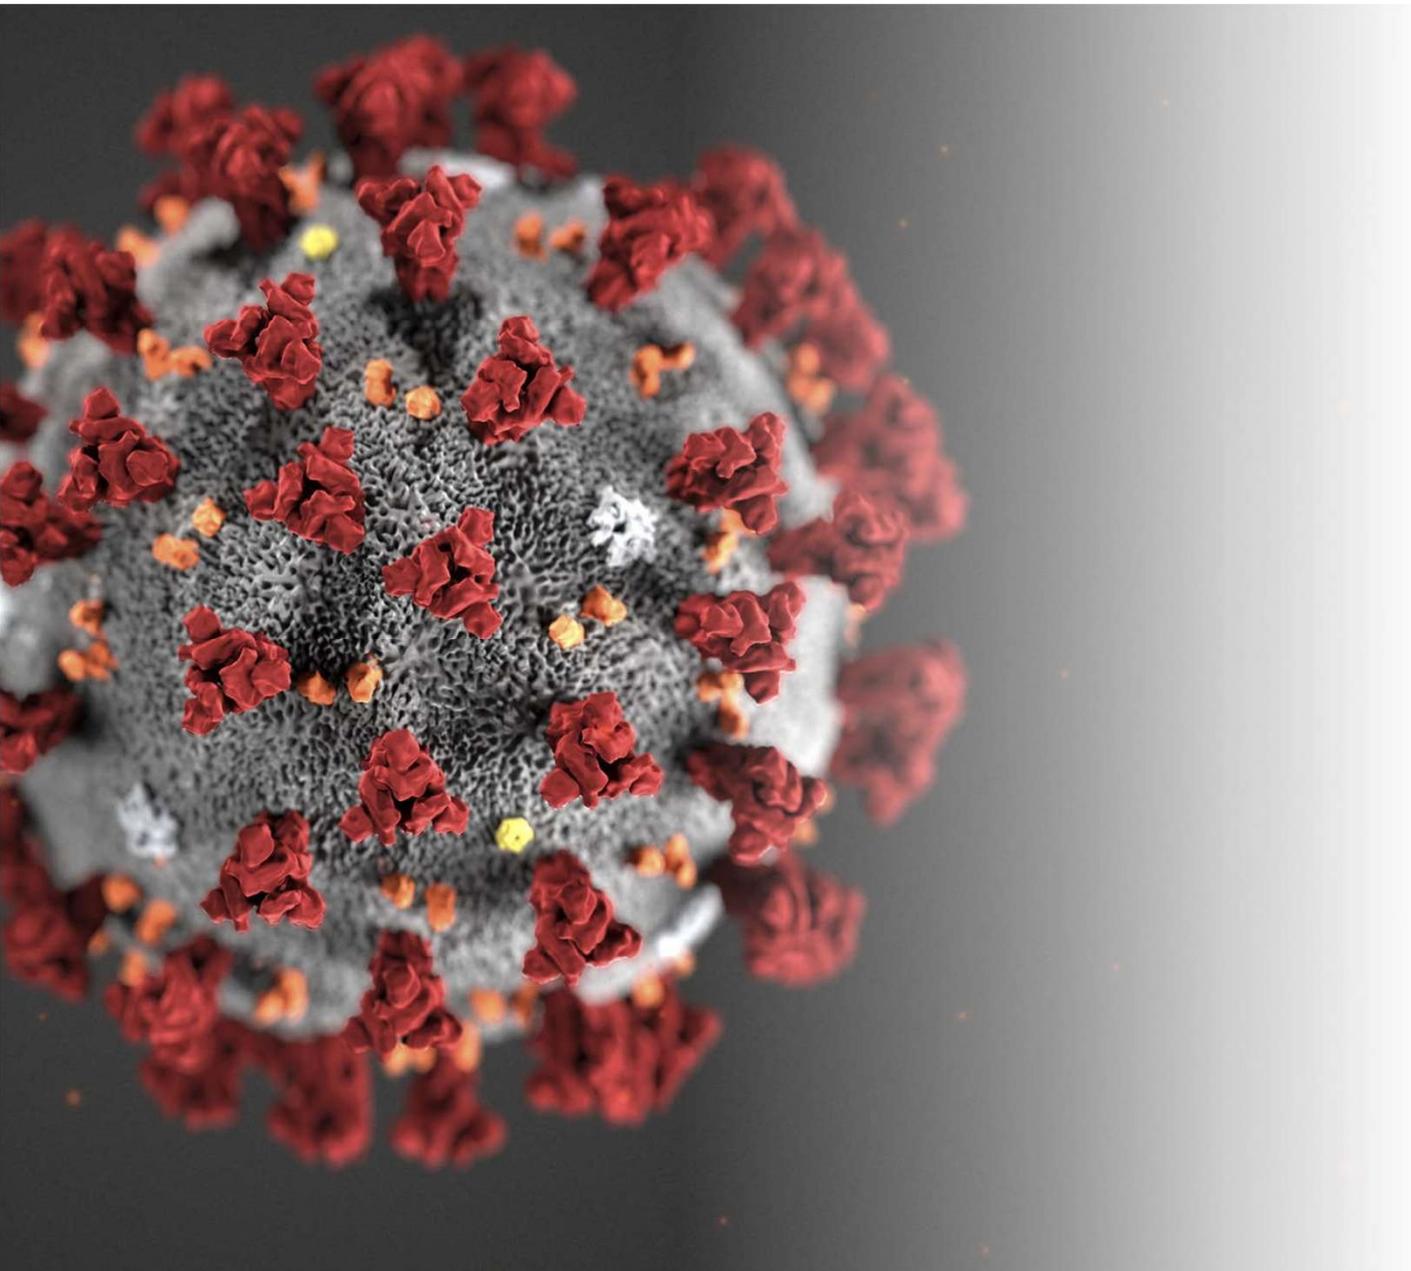

Higher QL

- Being PhD
- + 10 years of graduation
- + than 20 MW
- Teaching area

Only 5.2% of the sample

- Being married

In a study conducted in Brazilians to assess QOL during the SARS-CoV-2 pandemic, a higher level of education also meant a better QOL (TEOTÔNIO et al., 2020).

Conclusions

- The Quality of Life of Brazilian Nutritionists decreased with the Pandemic.
 - The worst was the psychological health.
 - More studies in the world evaluating this professional are needed.
-
