Abstract:

Biodiversity loss has been demonstrated to have direct impacts on human welfare. However, policymakers need to refer to commonly accepted standards to monitor biodiversity, especially to direct fund granting. Intending to collate information for the creation of a reliable pollinators' one, we screened available indicators. Our first criterion was selecting indicators applied in agricultural contexts and legitimated by a regulatory agency. Further, we included indicators referring to any arthropod taxa and officially recognized at least by national bodies. We compared survey scale, monitoring scheme, type of environment, sampling effort, expected arthropod population, taxonomic level of data. As a common approach, we identified the combination of a territorial analysis by remote tools (e.g. GIS) and animal taxa surveys. The strength of indicators including arthropods emerges in the simultaneous inclusion of biotic and abiotic components. However, most of them just refer to confined environments (e.g. grasslands, riversides). Pollinators' sensitivity to changes at the micro-habitat level is widely recognized, even helping to distinguish different methods of agricultural management. To develop a biodiversity indicator based on pollinators, we suggest improving knowledge on local pollinator species and their environmental requirements, coupled with wide (in time and space) national monitoring programs.

Keywords: biodiversity; agroecosystems; arthropods; environment; pollinators; indicators; RDPs measures

BIODIVERSITY of the AGROECOSYSTEMS

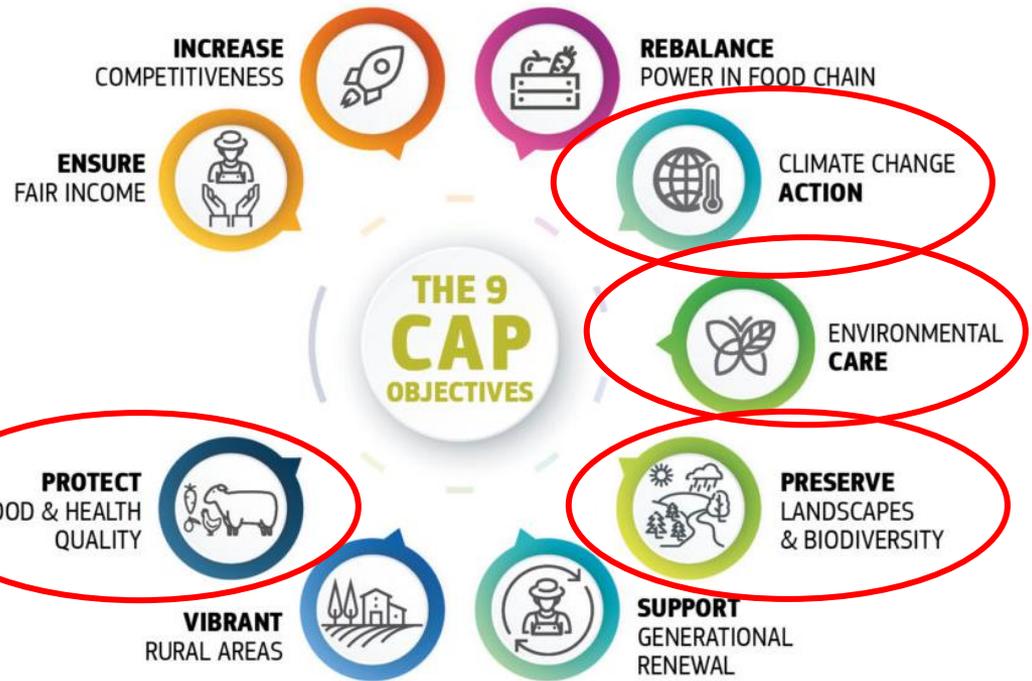

crucial to tackle

- food security
- human and environmental health
- climate change

sustaining BIODIVERSITY

through

- greening measures
- country/continental survey
- fund granting to local farms

evaluation based on bioindicators

implementing indicators with POLLINATORS?

Pollinators: desirable candidates

BUTTERFLIES

BEES

HOVERFLIES

why IDEAL subjects?

- perform services in support of food production
- indirectly inform on pollutants and environment

- reverse the decline of pollinators (EU Biodiversity Strategy for 2030)
- monitoring: group of experts at work (EU Pollinator Monitoring Scheme)

in Italy:
a pilot indicator
(in progress)

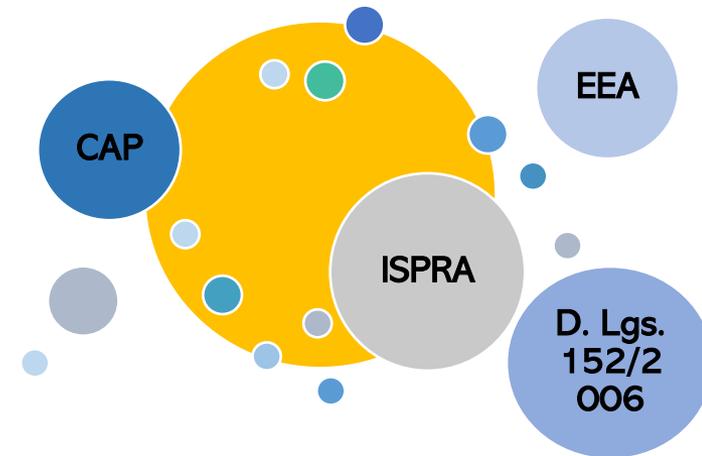

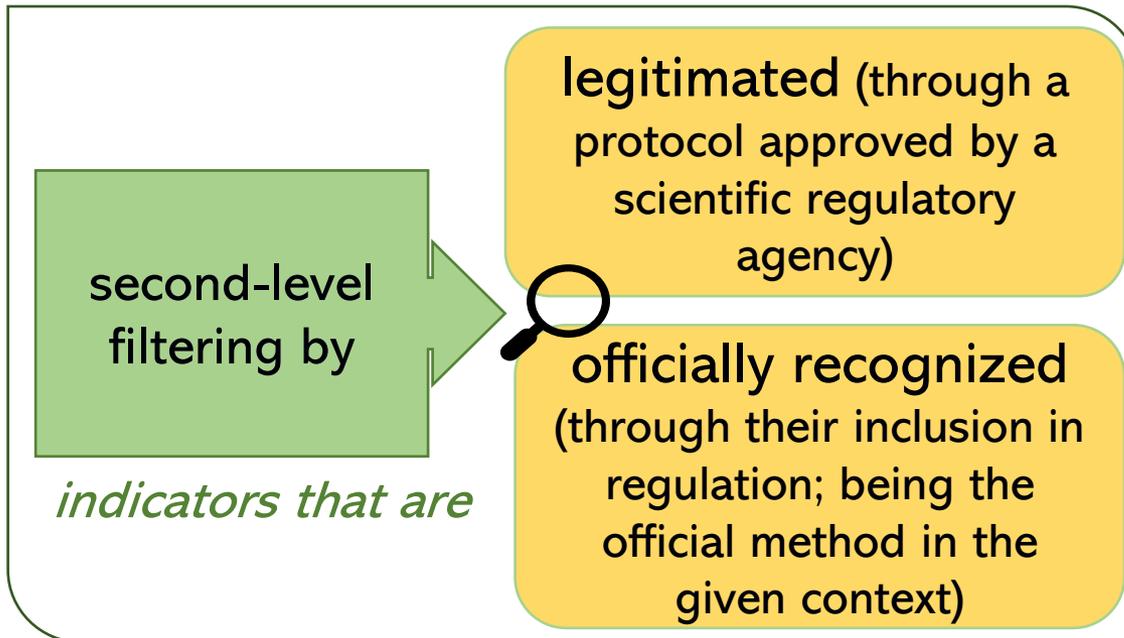

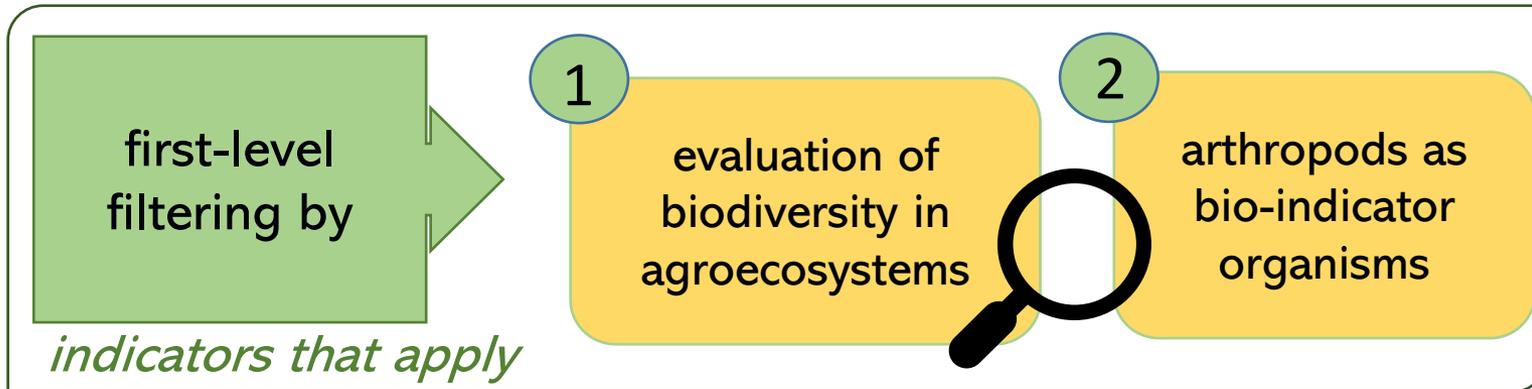

BeeNet
Italian Monitoring Network

- identifying and analyzing the structure of other bioindicators
- data collection

How to proceed: methods

*bibliographic search
through official websites of the regulatory agencies*

Methods

From the selection: 8 indexes/indicators

	indicator/index	acronym	legitimated	officially reckon
biodiversity	Farmland Bird Index	FBI	EEA/2005	CAP (from 2000 to post-2020)
	High Natural Value Farming	HNVF	EEA/2004	CAP (from 2007 to 2020)
	Proxy	PrY	EEA/2019	CAP post-2020
arthropods	Fresh water macrobenthos index	STAR ICMI	ISPRA/2014	Directive 2000/60/EC
	Grassland Butterfly Index	GBI	EEA/2013	none
	Soil macrobenthos Index	QBS-ar	(CREA, ISPRA)	Emilia-Romagna Region (from 2015)
	Sirph_the_Net	STN	ISPRA/2015	none
	Ground beetle index	GrB	ISPRA/2005	none

From the selection: 8 indexes/indicators

Taxonomic groups

all taxa of pollinators; but not at the same level of detail

Spatial context

from largely adopted European monitoring plans to individual case studies.

Baseline background

rate of extinction risk, morphometric adaptations to individual microhabitats

Sampling effort and level of taxonomic identification

monitoring plans include a different pool of species; trained professional and volunteers; identification in the laboratory; type of collected data

Final output

compare a resulting value with a reference (year, farm, a given population); or set of user-friendly values so that also non-experts can compare

what to focus on?

for an indicator on pollinators

cartographic analysis of the territory

sharpened to greater detail

complex indicator based on several indexes

including environmental parameters and the target taxa

integrate abundance and occupancy

widening monitoring and the range of legitimated methodologies

ABUNDANT FIELD
TESTING AND PUBLIC
AWARENESS

REFINEMENT PHASE
AND PILOT STUDIES
